

Check My Meal

Real meal insights + care-category nutrition previews. Your Diet is not changed in this revision.

Your meals

Photograph or manually enter a meal. Confirm foods, portions and preparation. Receive estimated nutrient information using the retained general free rules, or facts-only output under the safety policy.

Explore care

Browse category-specific educational content about the nutrition topics that relevant iLive Care can consider. A browsing choice is not a diagnosis, programme enrolment or a clinical scoring instruction.

One non-negotiable distinction

The preview you browse must never silently change the rules used to judge your real meal. The same inputs and approved analysis version must give the same result regardless of the category you explored.

What is in this set

6 draft preview profiles · 14 reusable logical view templates · 27 screen-state snapshots · 3 workflows · 46 proposed QA scenarios

This reference uses illustrative data and proposed content. It is not a working clinical service, production API test, signed medical approval or a change already posted to GitHub.

What changes — and what does not

Use this PDF together with the replacement issue, backend contract, content catalogue and calculation annex.

Changes in v2.0

Optional care exploration is added inside Check My Meal. Six profile-based previews use the same layout. Complete published content and commercial actions come from the backend. The mock set adds confirmation, editing, permission, failure, history and expiry states.

Retained boundaries

Actual free analysis uses the existing general profile or facts-only mode. No personal calorie budget, one-meal-per-day quota, condition-specific verdict, automatic nutritionist review or new Your Diet implementation is introduced.

Backend-first, with a defined mobile renderer

Backend owns policies, access, complete content bundles, food mapping, safety decisions, results and permitted care actions. Mobile renders allowlisted blocks and captures input. Content updates within supported templates should not require an app release; new interactive capabilities still do.

Release gates remain visible

Medical approves content and numeric rules. Data supplies the governed food catalogue. Privacy/Security approves processing and retention. Business confirms plan benefits. Product/UX accepts the revised scope and screen behaviour.

Important: all six supplied category entries are disabled draft content. Mock visibility is for review only. Previous generated infographic images are superseded; they are not part of this implementation set.

Screen states, not 27 independent pages

Long mobile screens are shown as top and continuation captures on the same PDF page. Full-height PNGs are included in the ZIP.

Every state has an annotation and a mapping to the paired requirements. Native screen-reader and device testing remain delivery activities; browser rendering is not accessibility certification.

Home entry

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Keep the existing Home hierarchy. Only the Check My Meal entry is revised; adjacent modules are unchanged.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

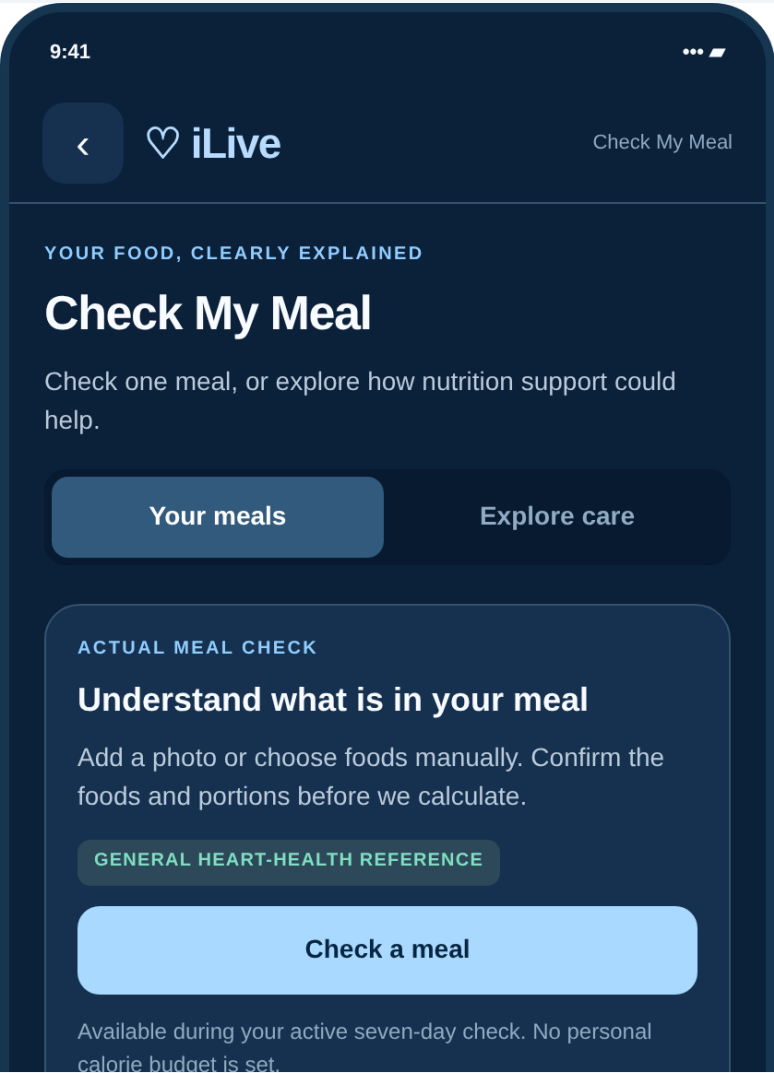

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

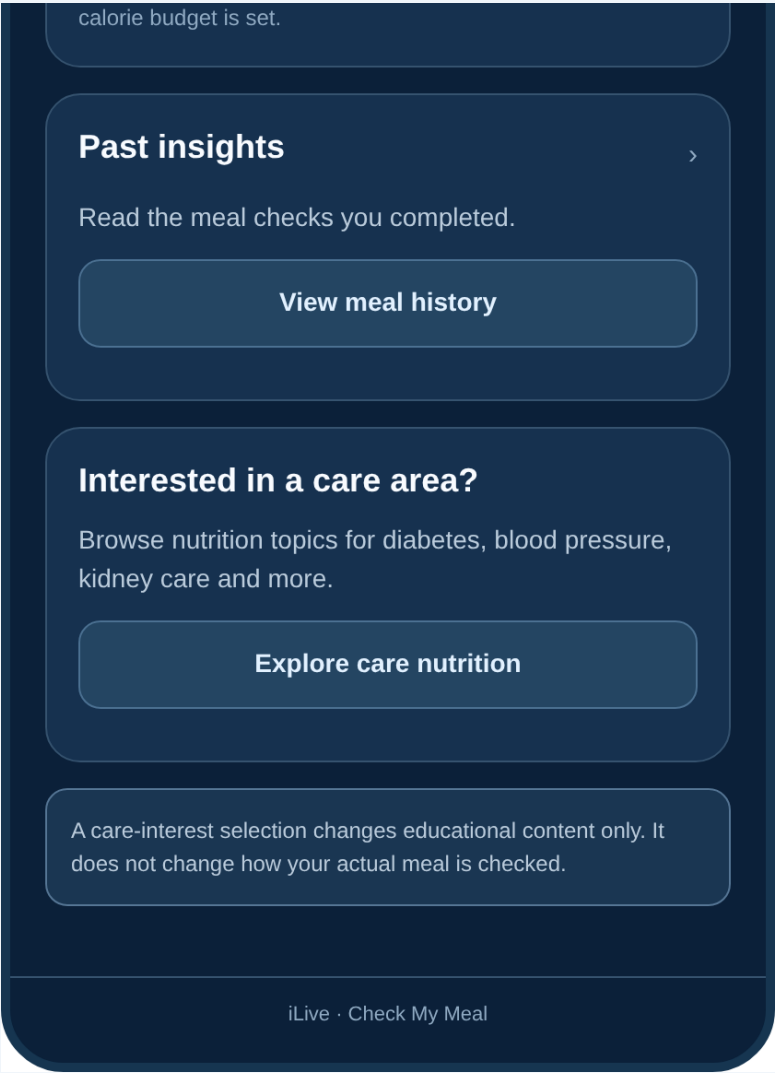

Your meals · active

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Default hub. General real-meal scope is explicit; Explore care is optional. No daily calorie budget or one-meal quota.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Choose a care interest

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Browsing only. Six draft categories demonstrate capability, not launch approval. Do not write selected interest to the clinical record.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

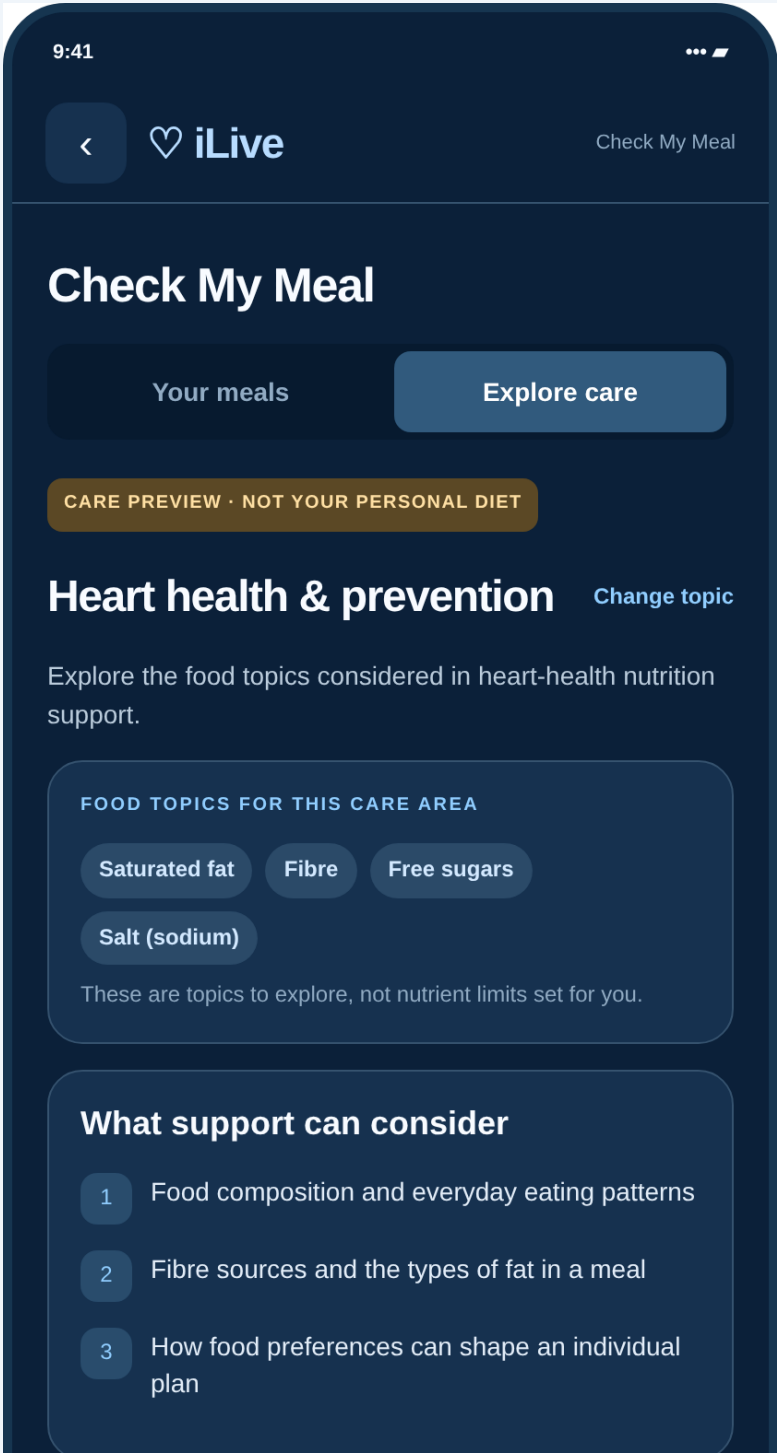

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

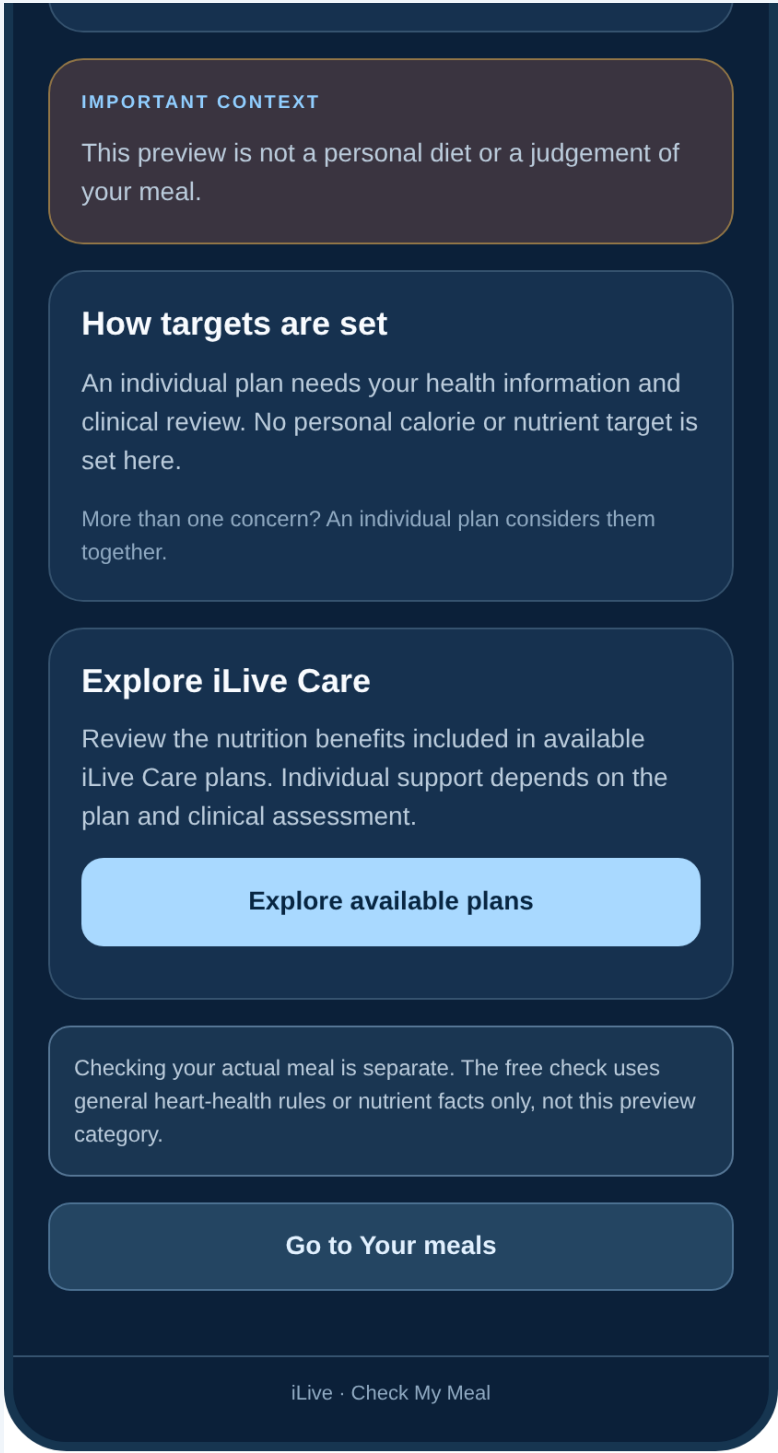

Preview - heart health

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

One preview template. Every visible section belongs to this category and is labelled as education, not a personal diet.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

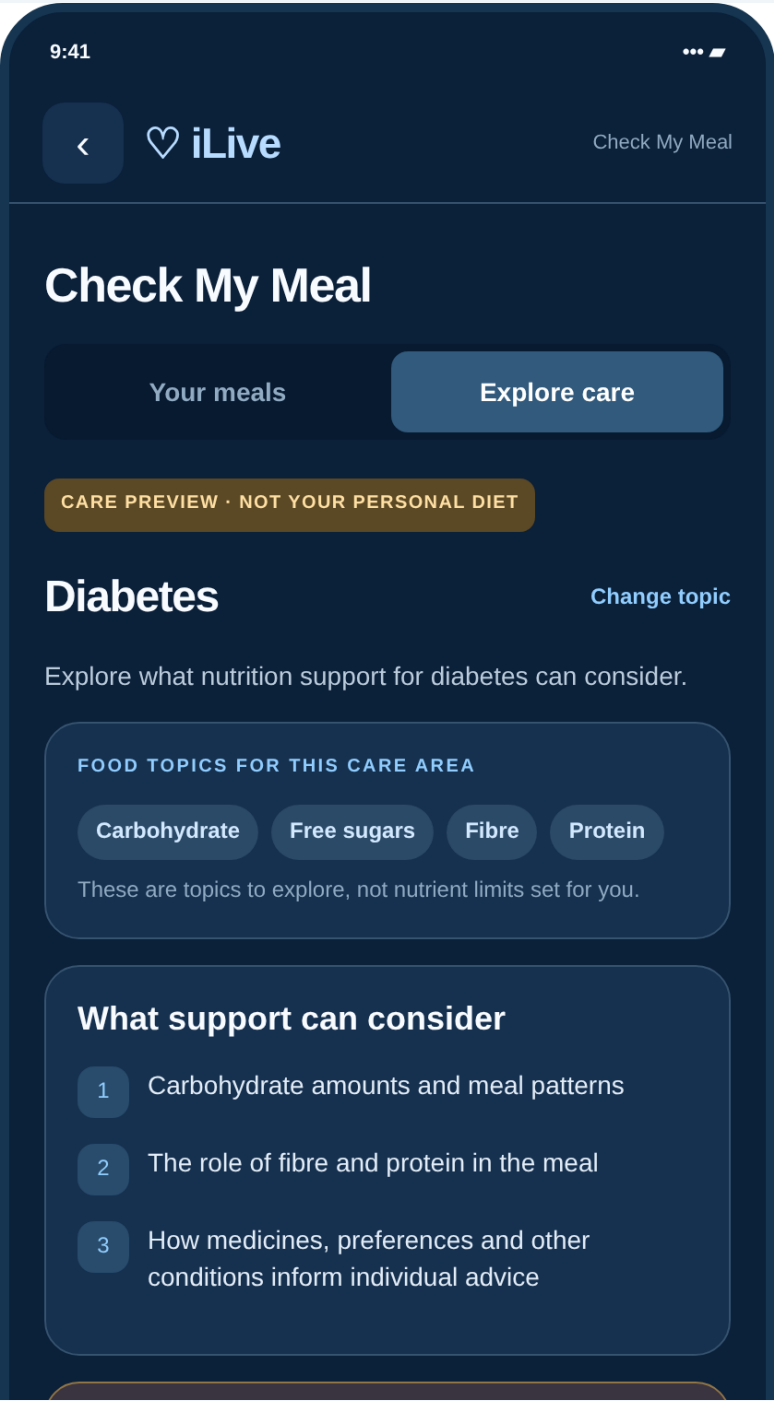

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

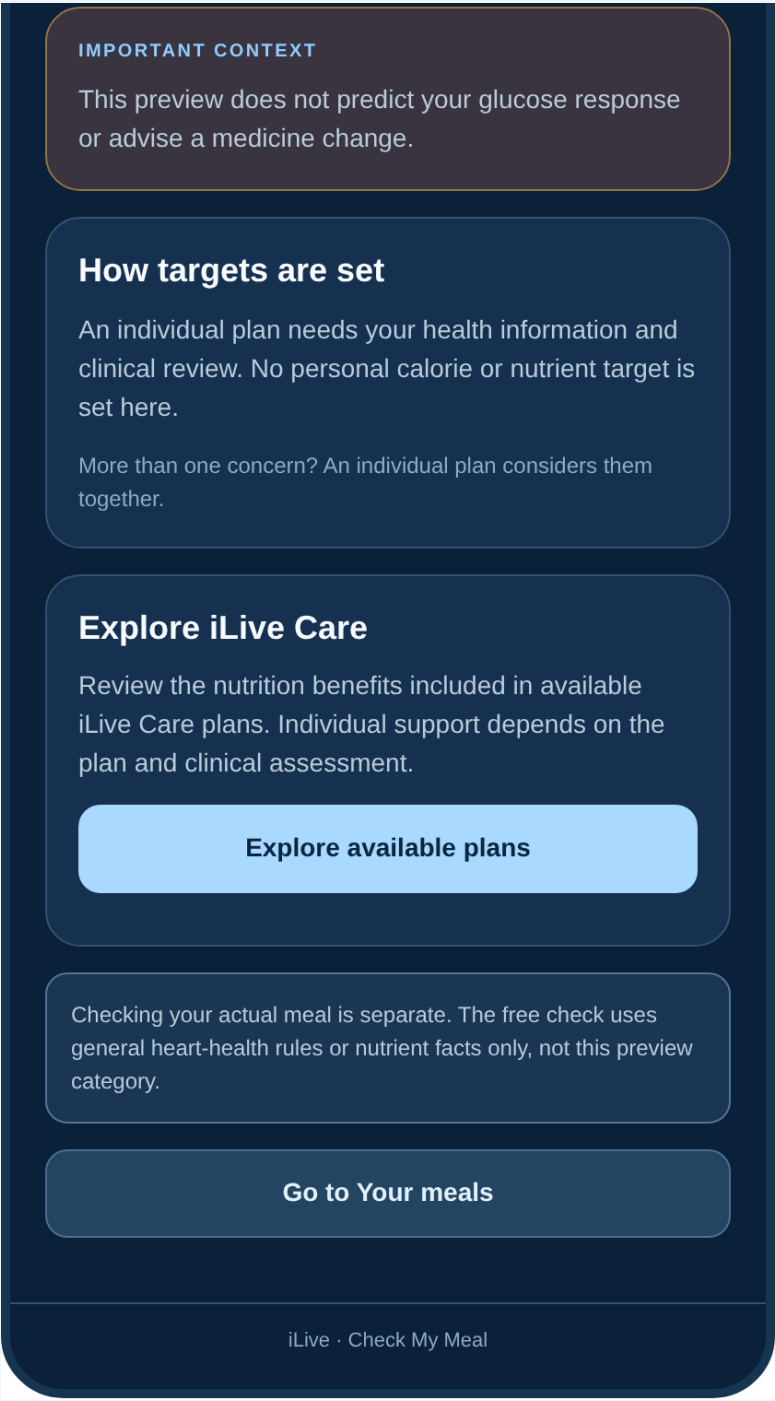

Preview · diabetes

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Category content changes, but the real-meal engine does not. A visible Your meals tab leads back to general checking.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

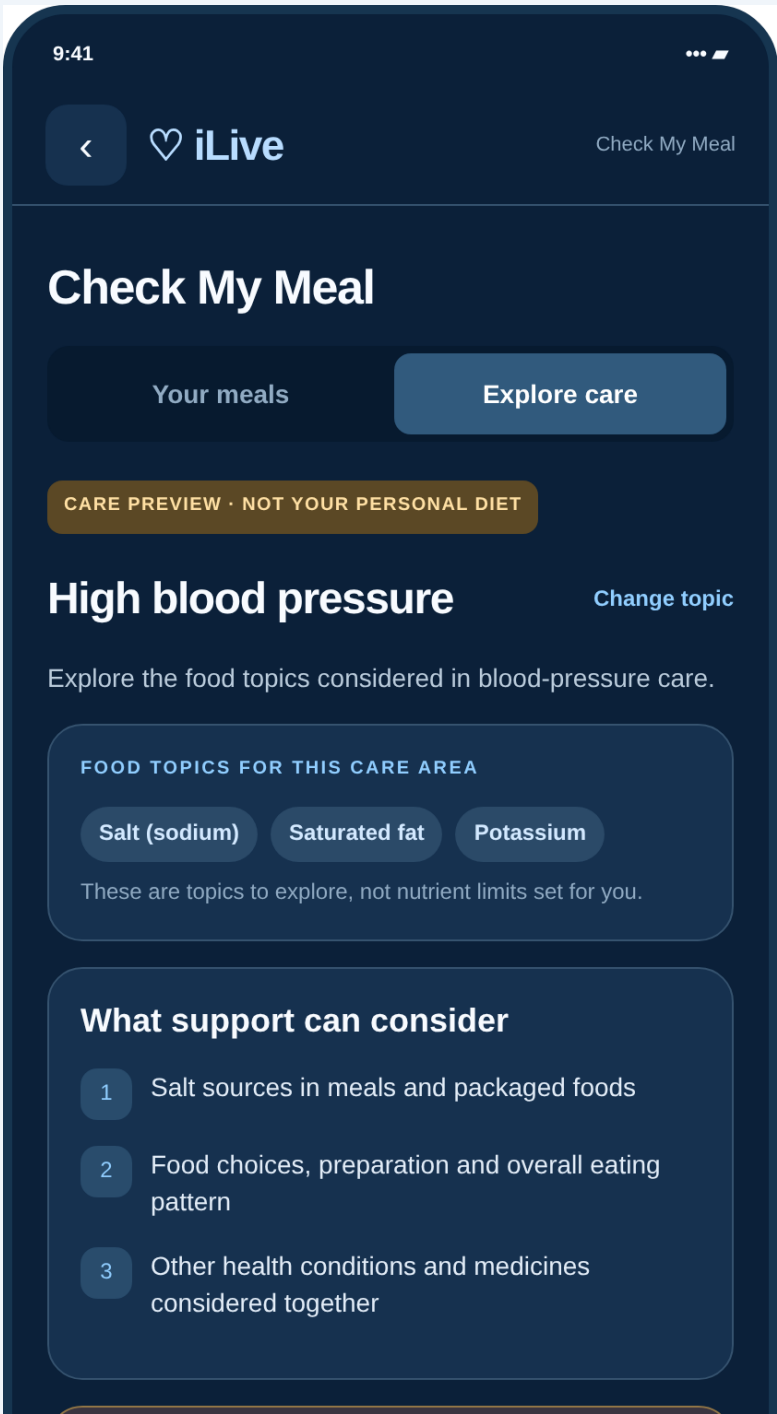

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

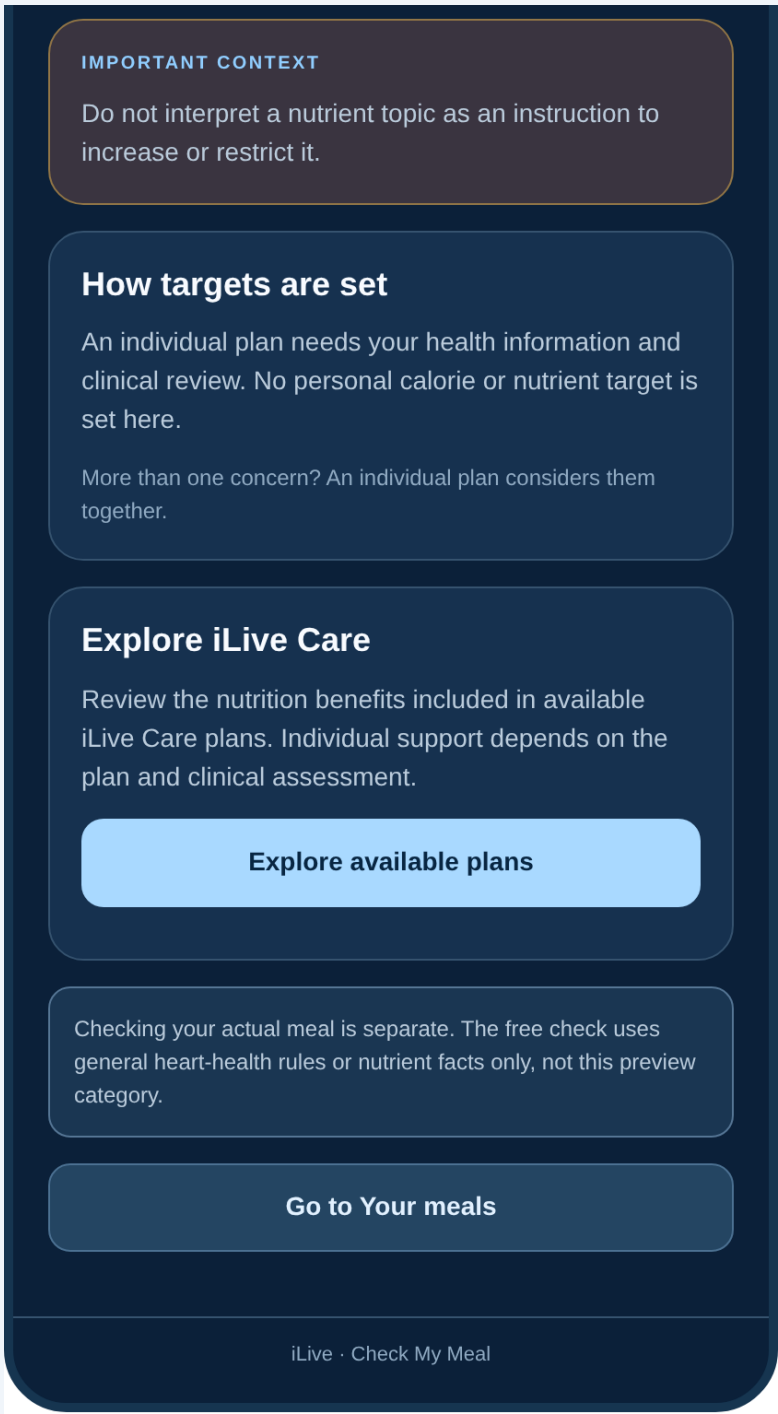

Preview - blood pressure

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Three nutrient topics are supplied for this source profile. Do not force every category to show four chips.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

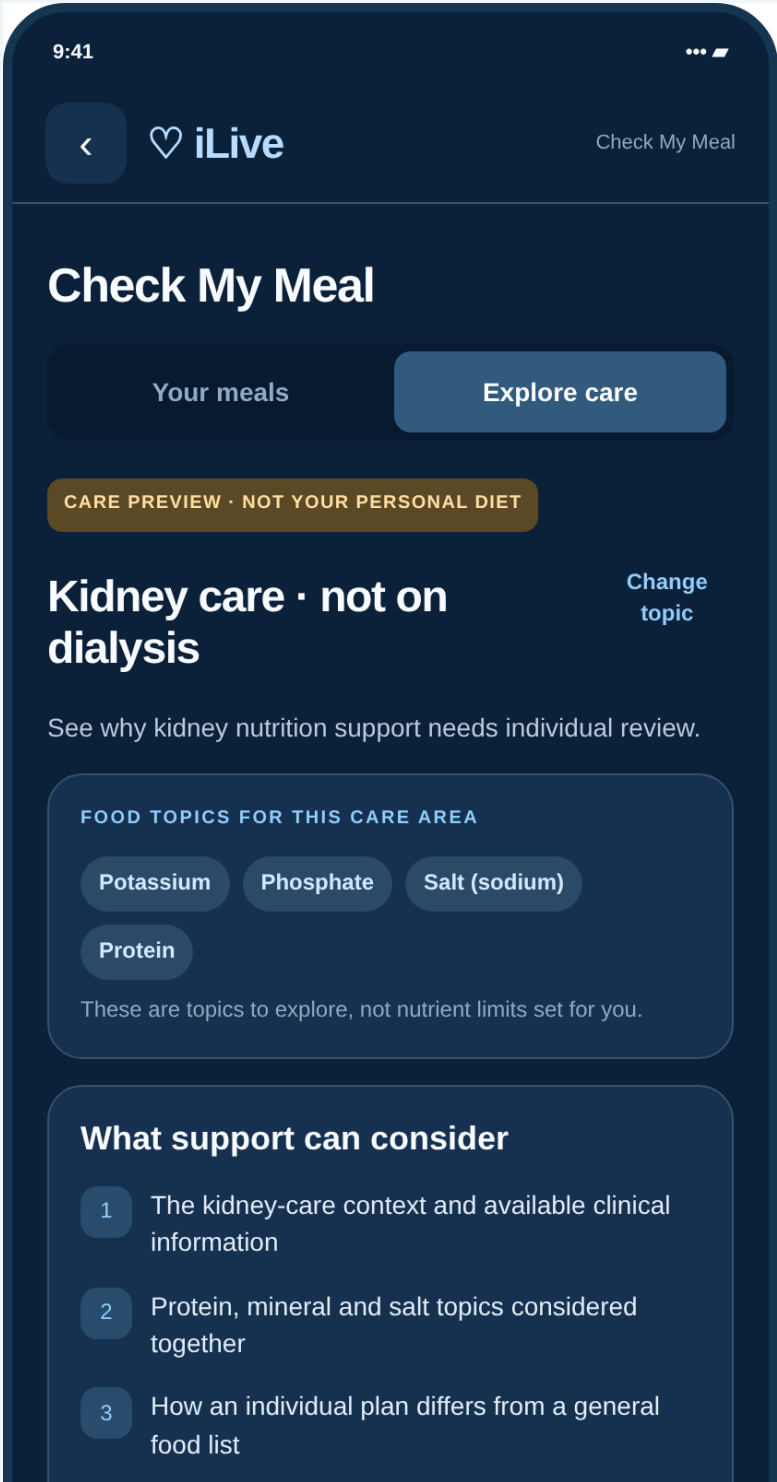

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

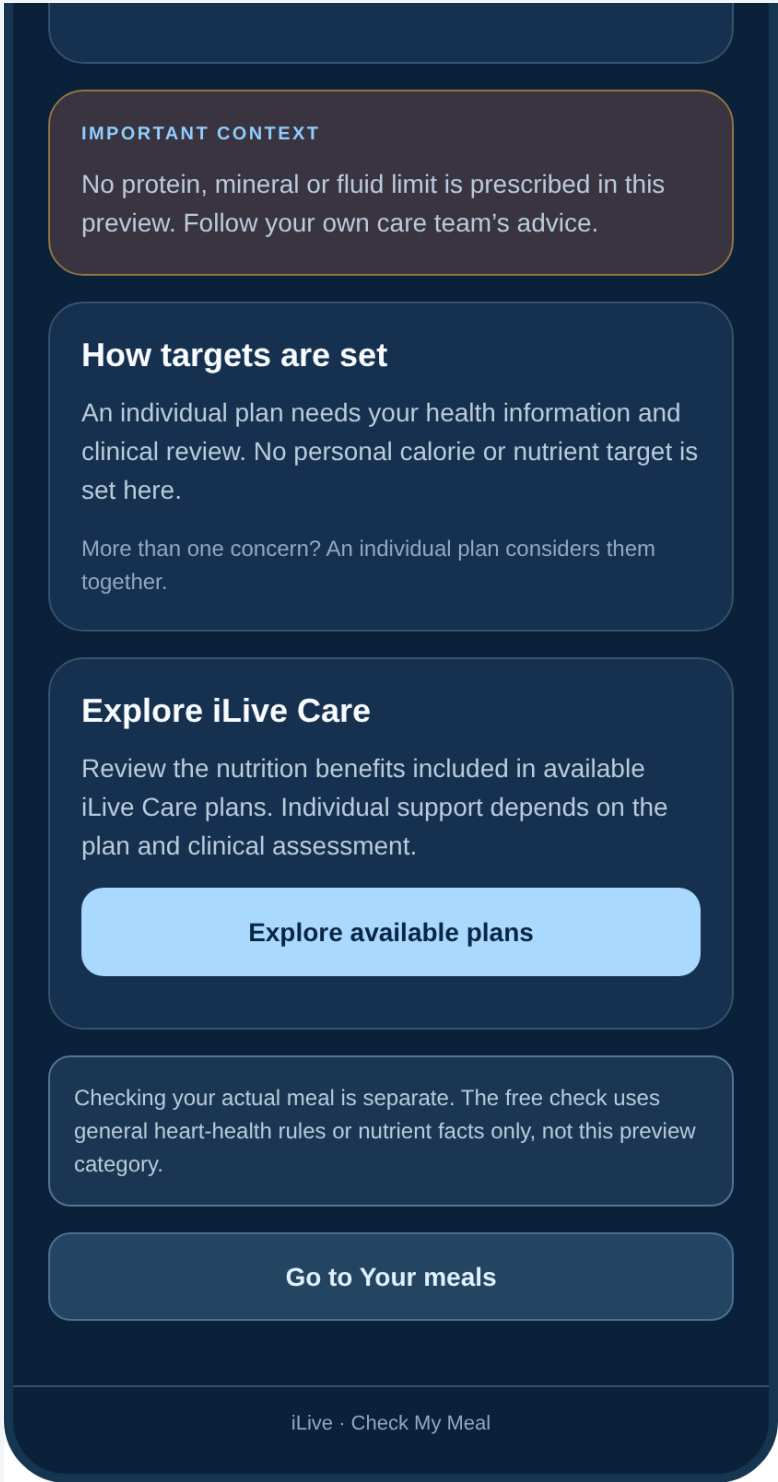

Preview - kidney care

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

No specific mineral/protein/fluid limits or blanket food prescription. Do not mix this preview with a real-meal verdict.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

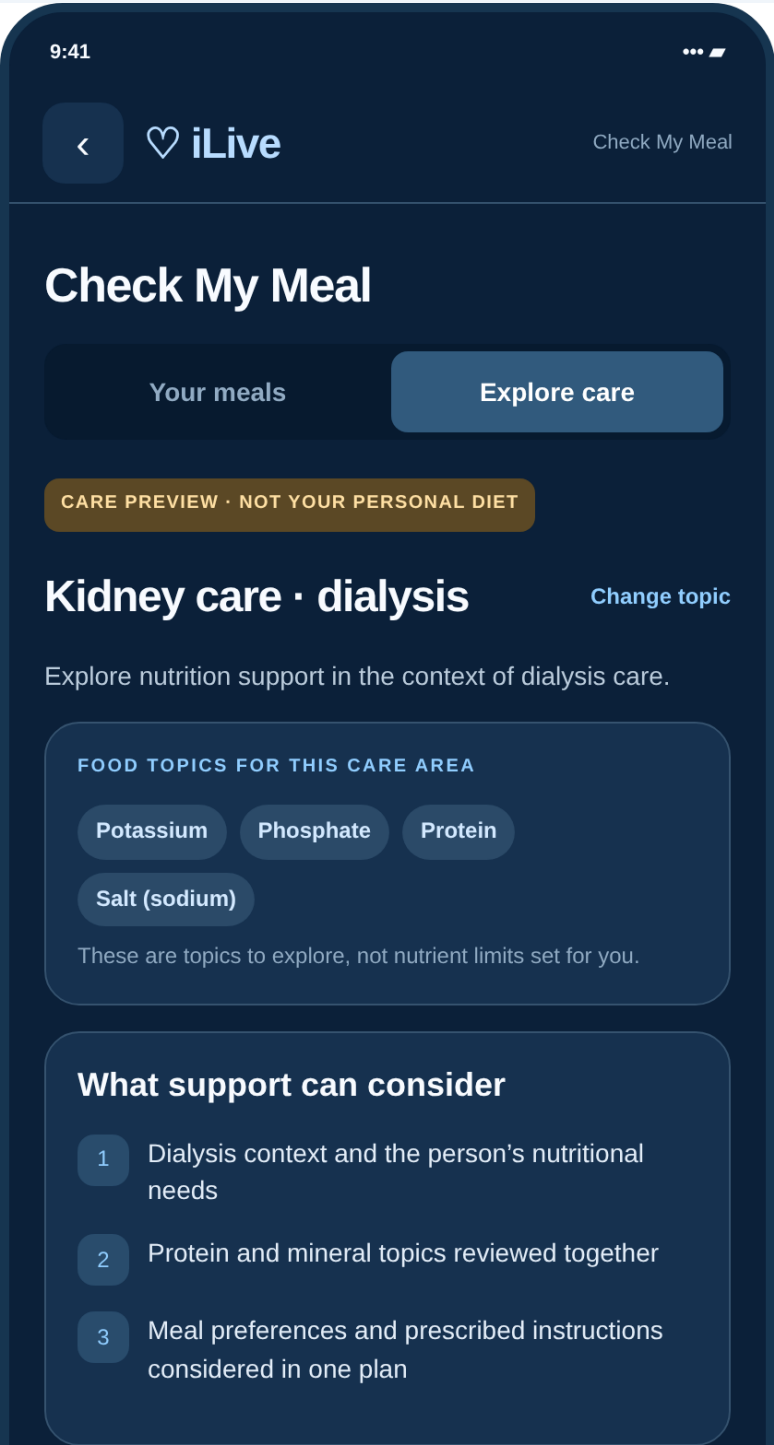

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

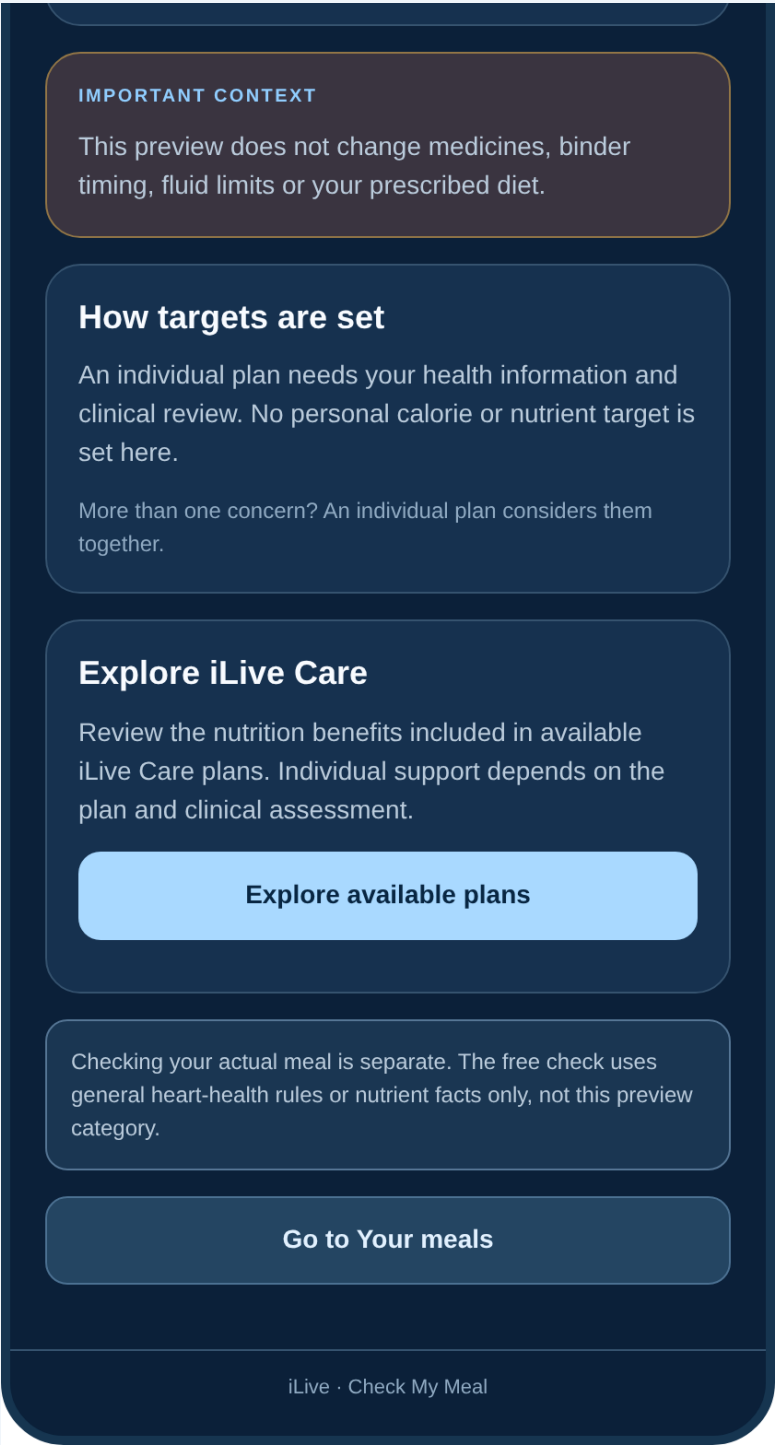

Preview · dialysis

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Separate content identity from non-dialysis. No medication/binder timing or personal treatment advice is published here.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

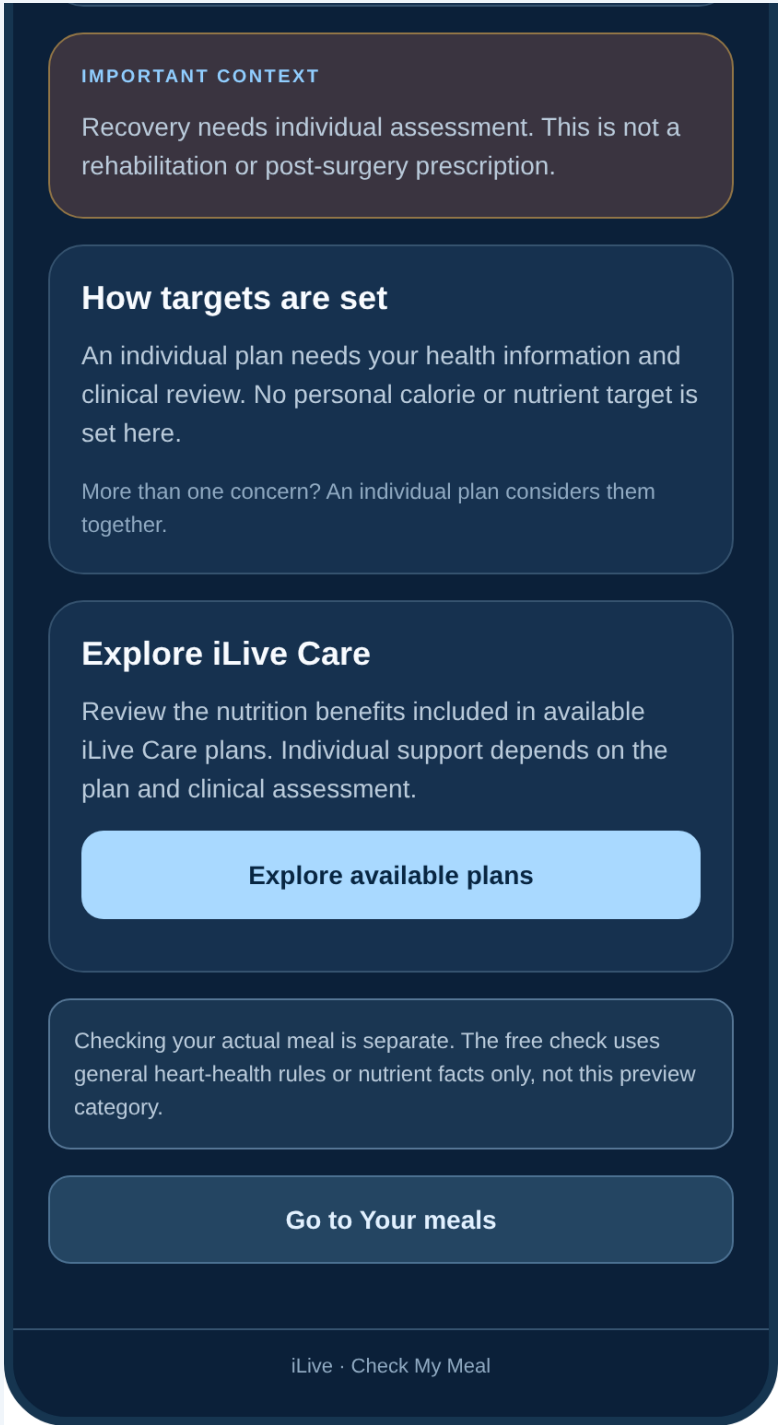

Preview - recovery

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Recovery is a draft content category, not automatic recovery-programme enrolment or rehabilitation advice.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

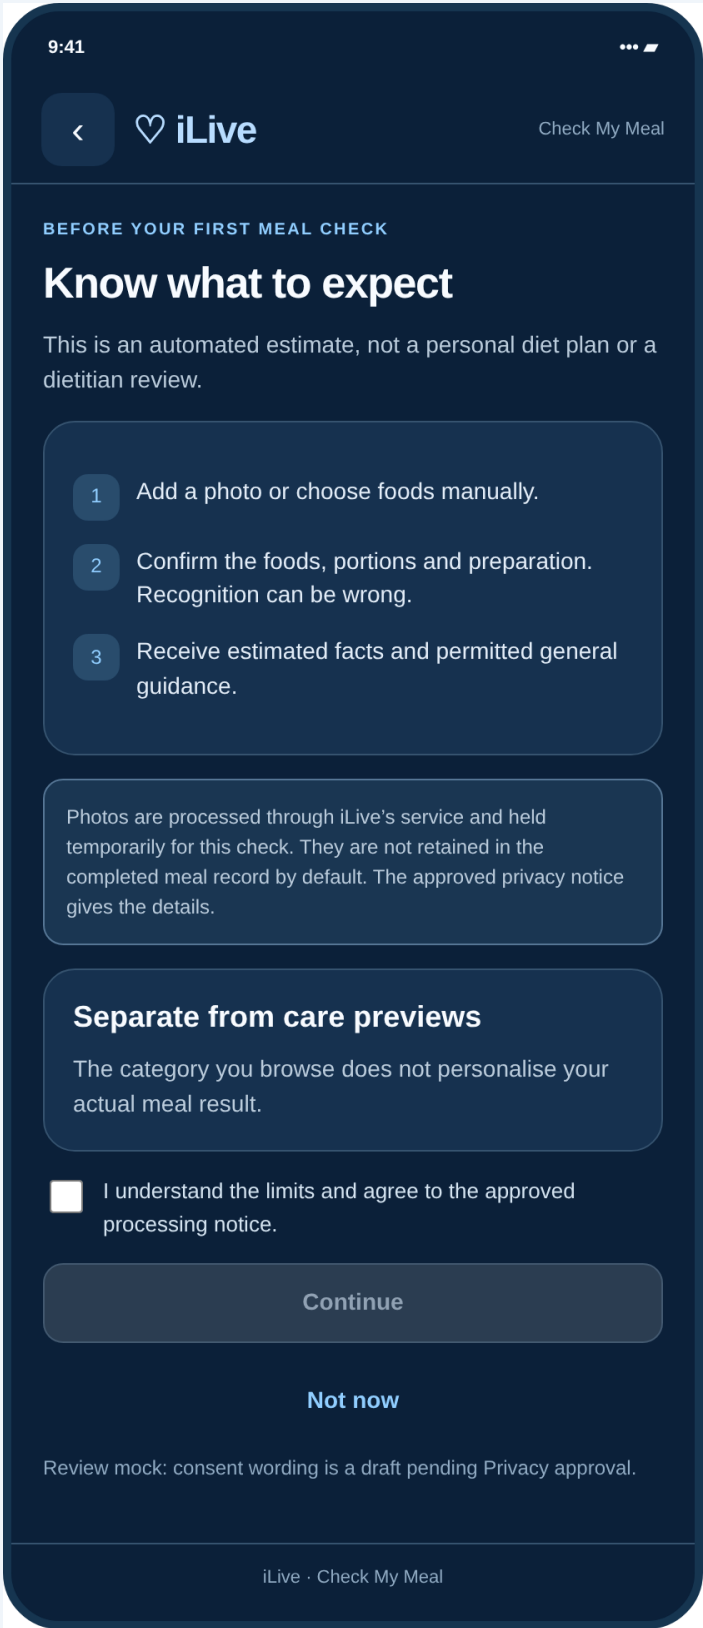

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

First use · explanation

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Shown before creating a real check. Consent text needs Privacy approval. Informational previews do not require image processing.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

An unanswered question is not "No". Browsing a kidney or diabetes preview does not answer these questions for you.

Continue

In production, every required answer is validated by the service. This demo does not store health information.

iLive · Check My Meal

What the team must implement

All six source fields remain explicit. This long page scrolls. No missing answer defaults to No/None; factual safety mode is derived by the server.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

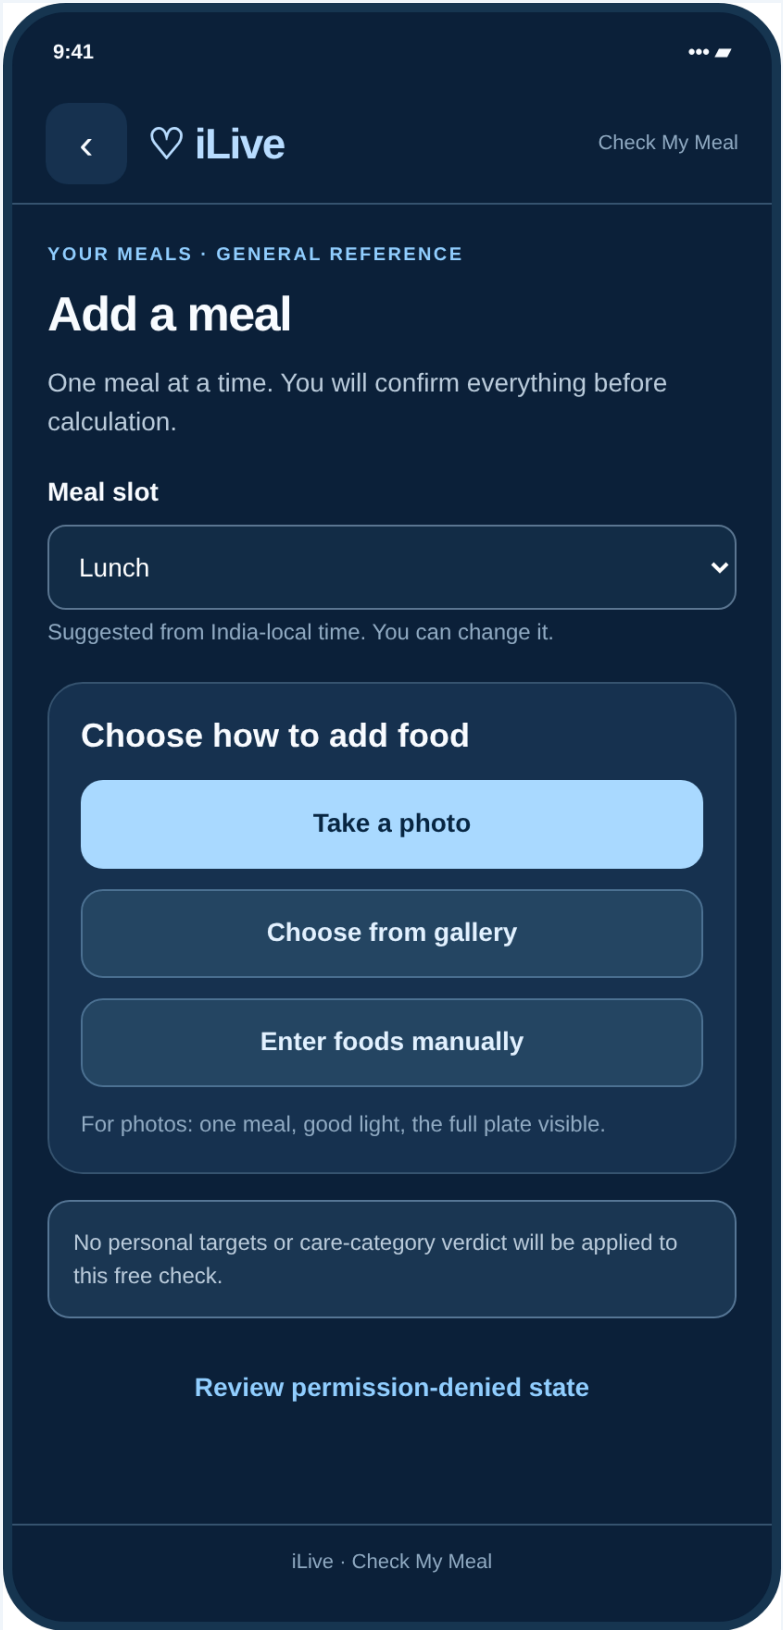

iLive · Check My Meal · v2.0 · 24 September 2026 · Proposed handoff; approval gates remain

14

Add a meal

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Camera, gallery and manual entry plus an editable meal slot. This review mock never uploads a real image.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

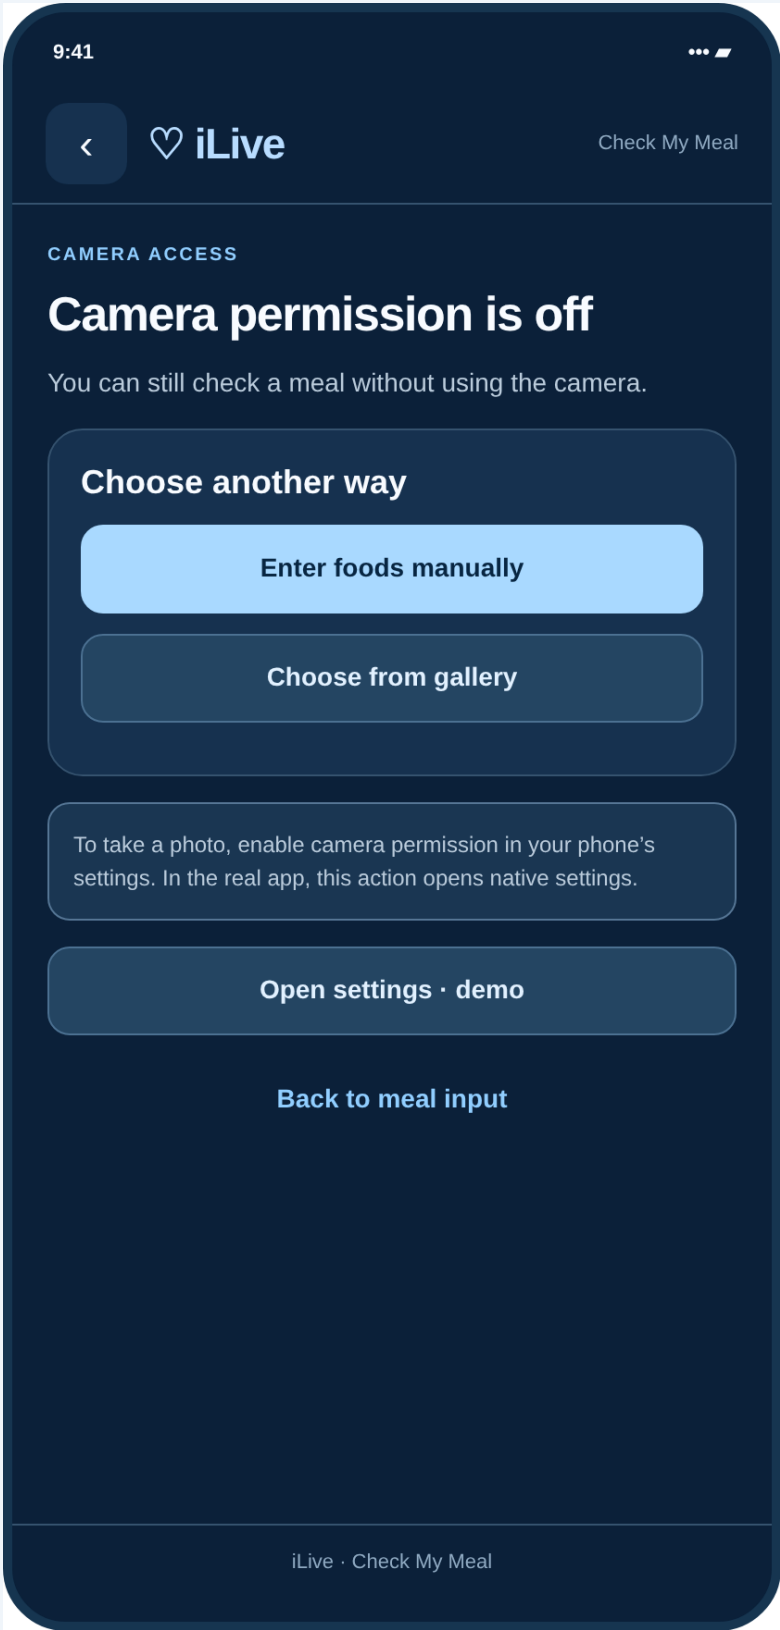

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Camera permission denied

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Permission state variant, not a new nutrition flow. Offer gallery/manual routes and native settings guidance.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

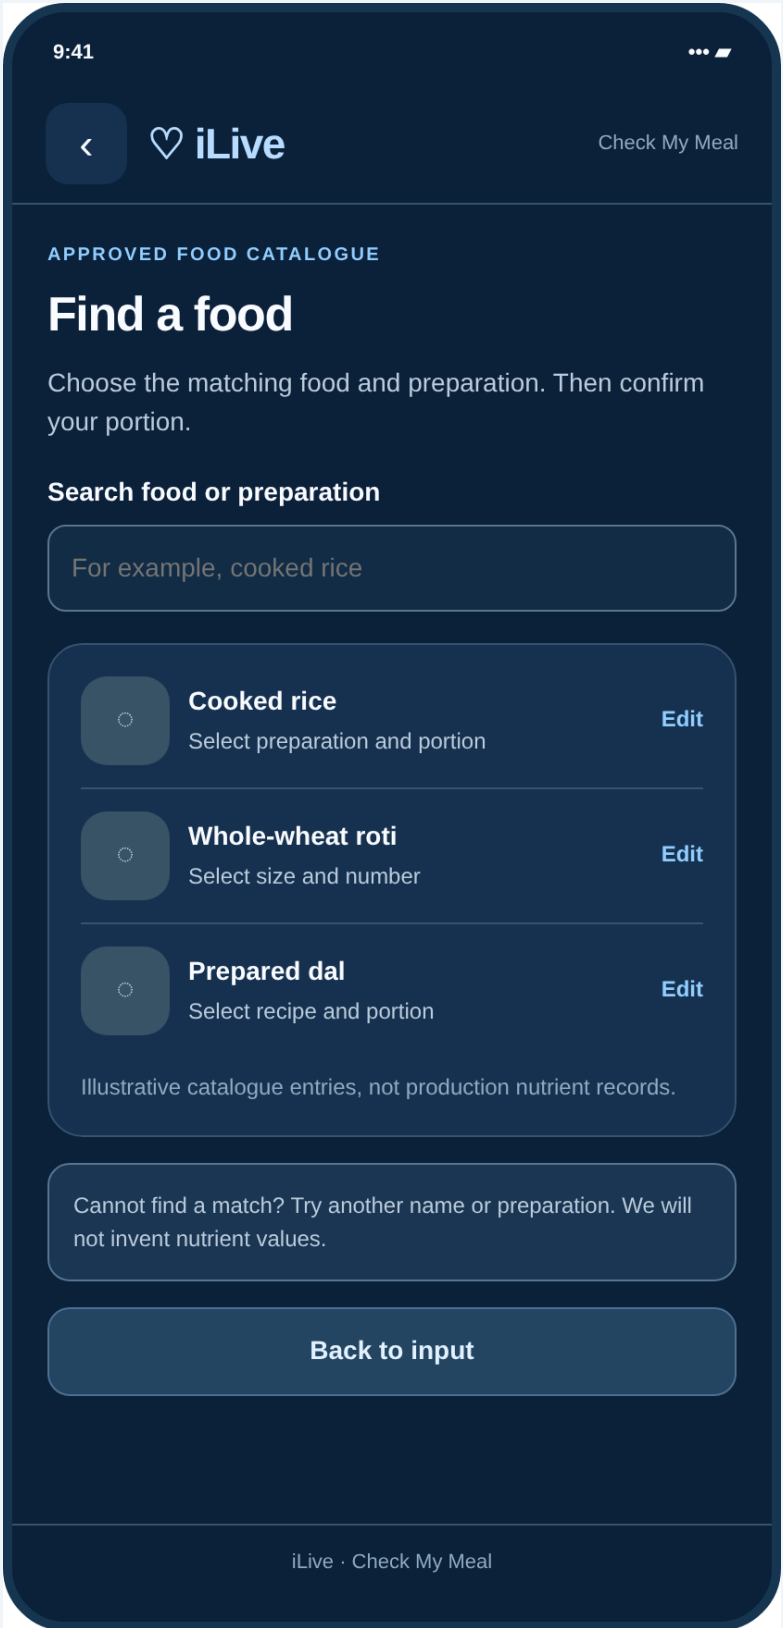

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Manual food catalogue

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Approved searchable preparation records. Search/add/edit interactions need existing catalogue identifiers, not model-created nutrient values.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

1 catalogue serving

The service supplies the serving-to-grams mapping. Do not use a guessed household measure or default missing quantity.

Save food & review meal

Remove this item

iLive · Check My Meal

What the team must implement

Update preparation/quantity from governed choices. Confirmation is invalidated by every edit; no zero or missing portion.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

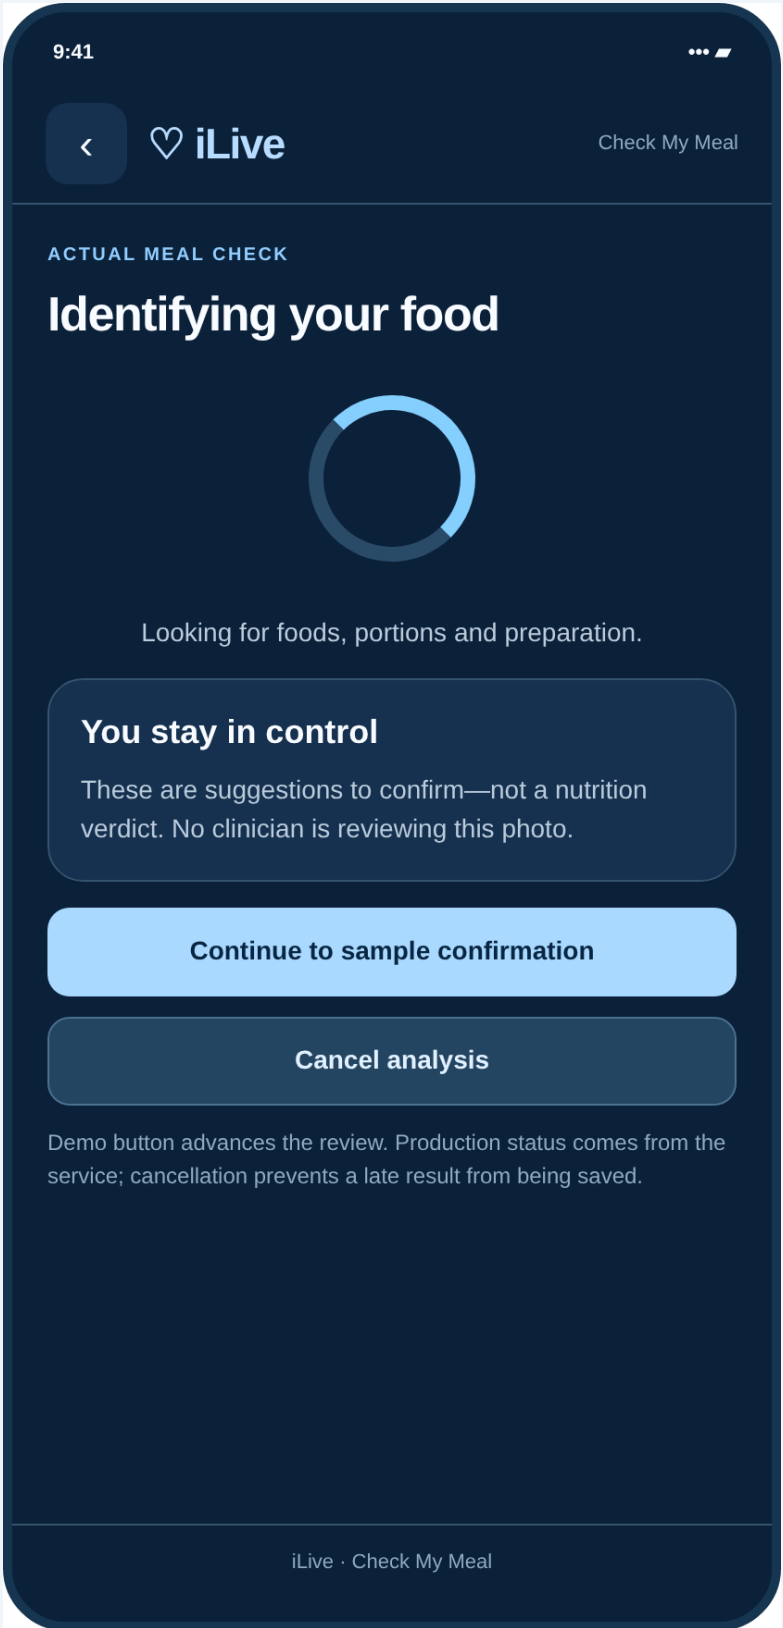

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Recognition in progress

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Identity/portion candidates only. Cancellation terminates work. No clinician-review wording; no nutrient verdict before confirmation.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

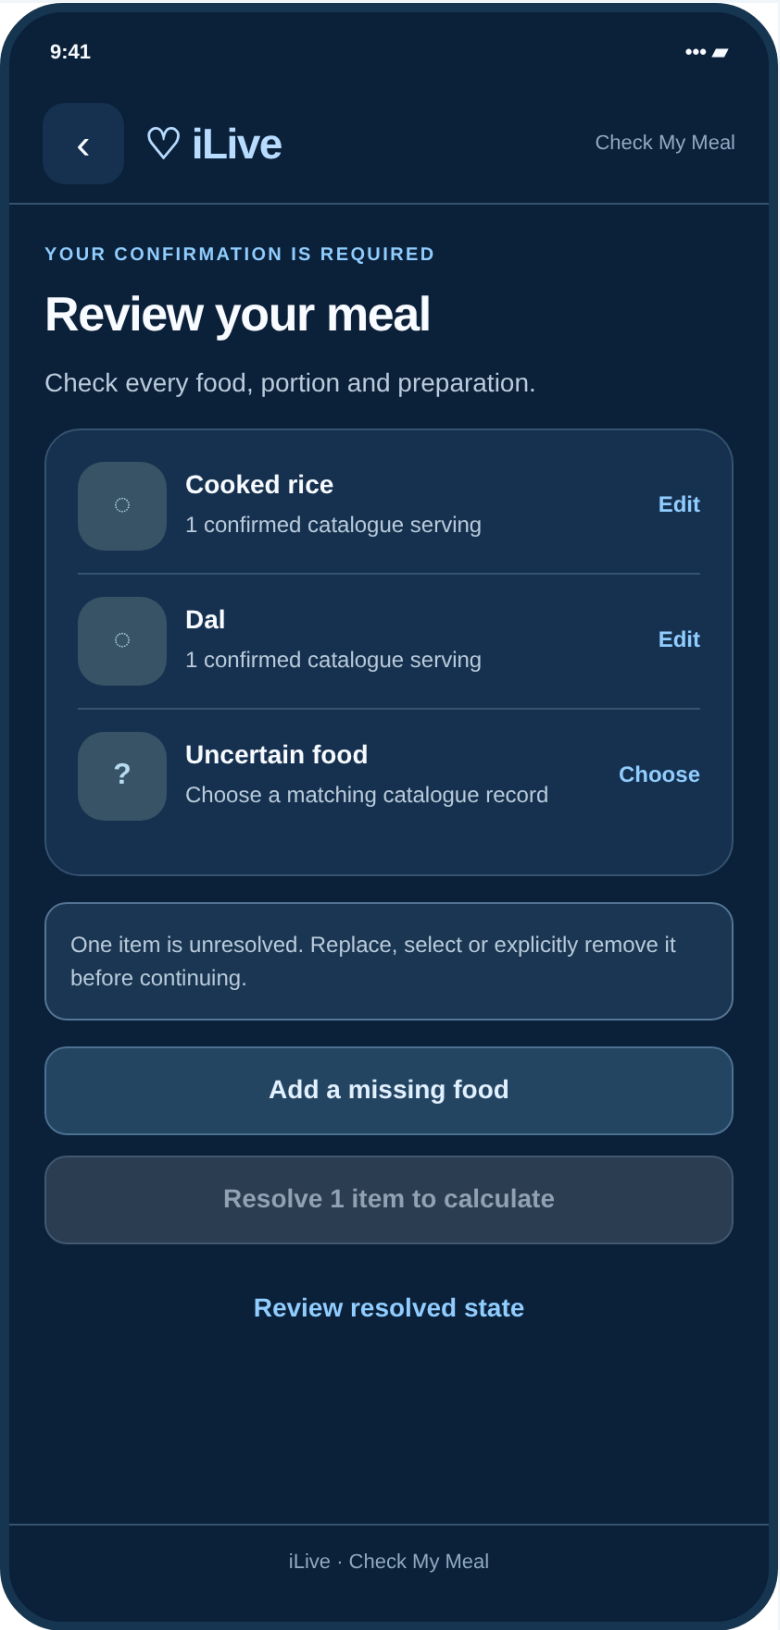

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Confirmation · unresolved

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

An unresolved item disables calculation. User must map, replace or explicitly remove it. No guess or silent omission.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

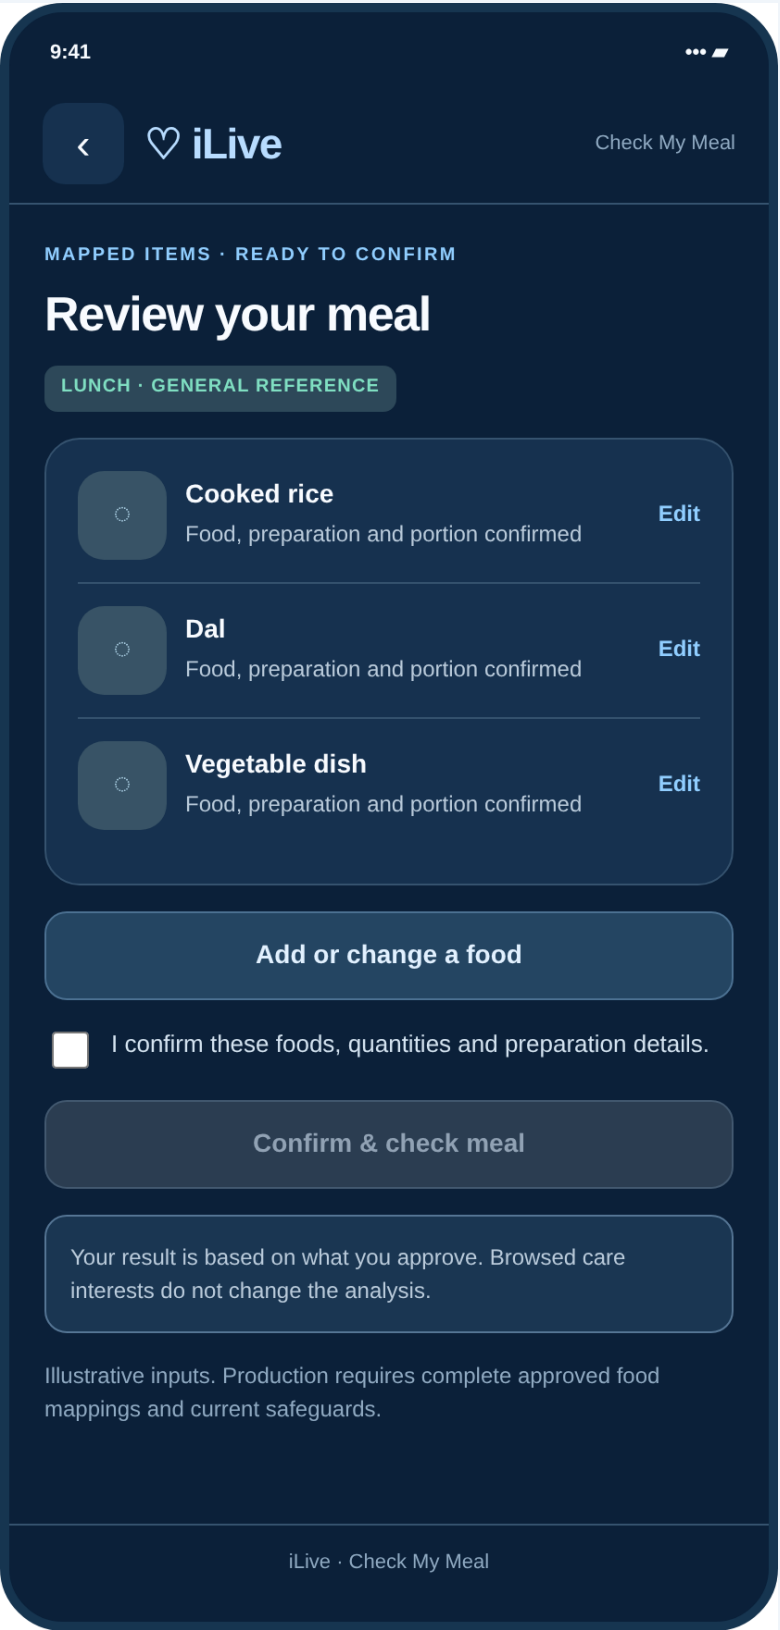

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Confirmation - ready

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Explicit confirmation required even with high-confidence image recognition. One server revision produces one immutable result.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

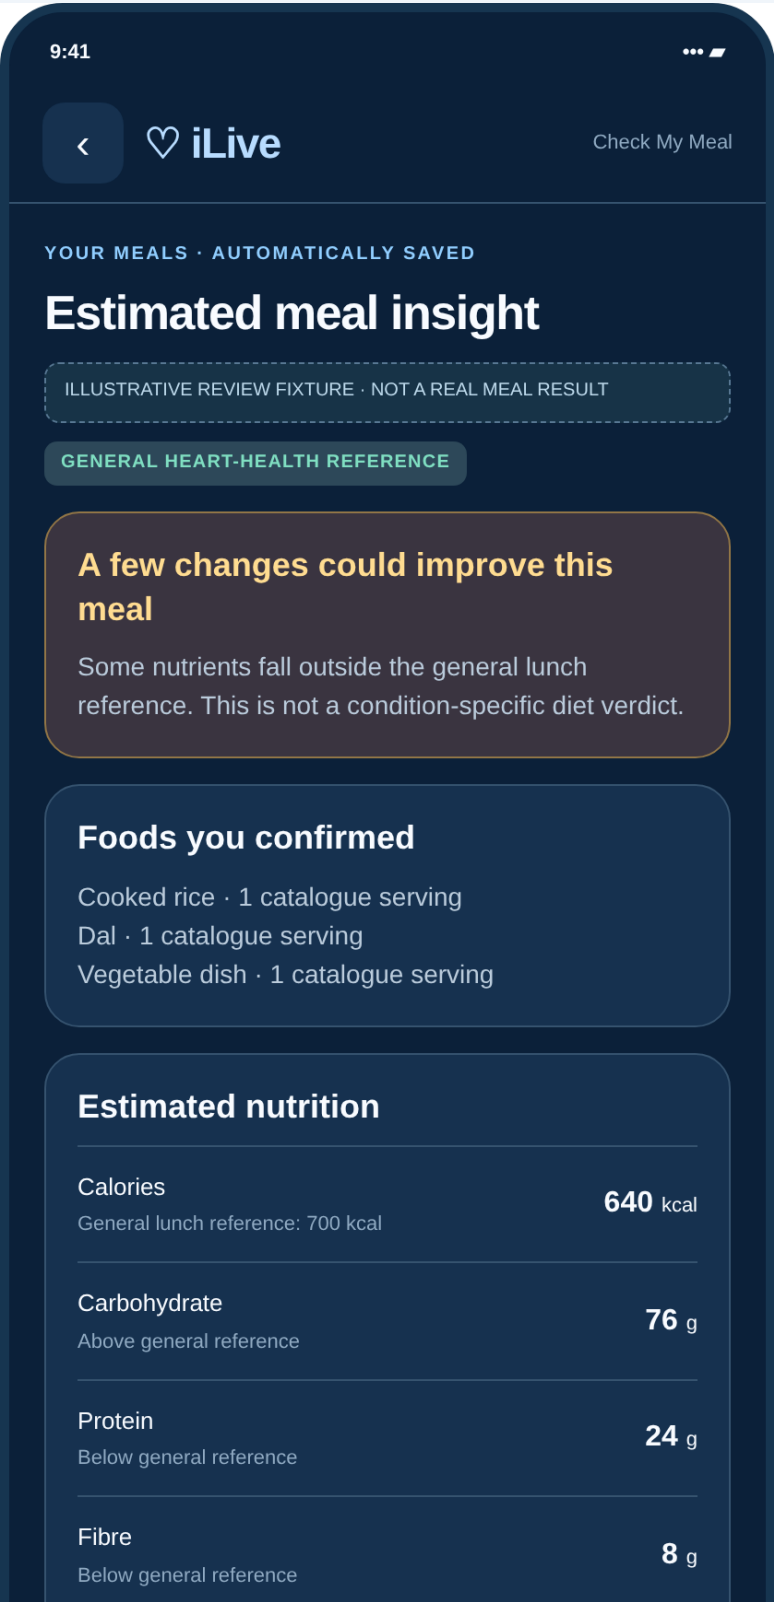

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

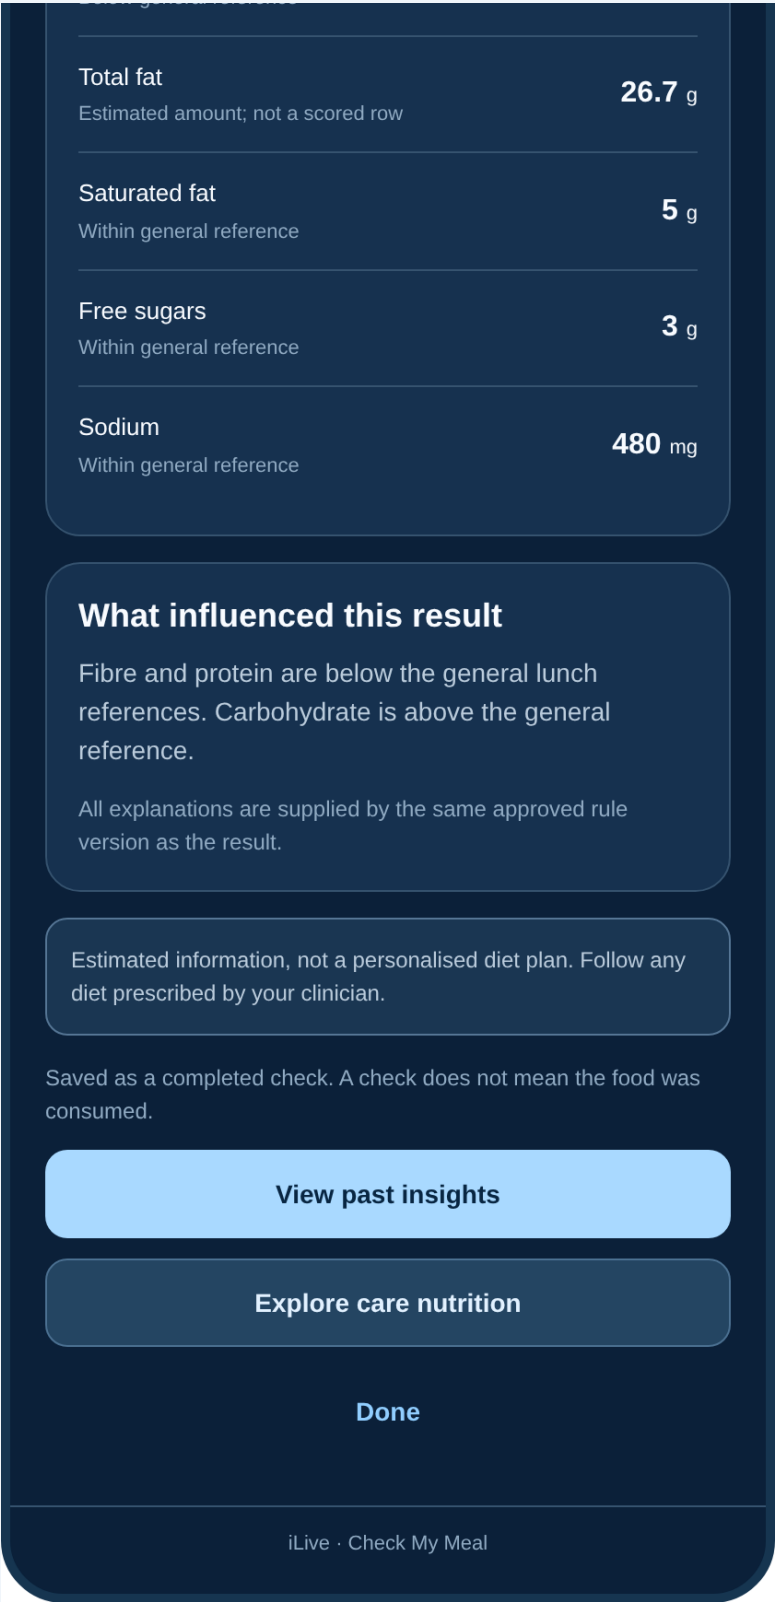

General meal result

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Illustrative numeric fixture, not a real meal. Server supplies all rows and observations; preview category is absent from the analysis context.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

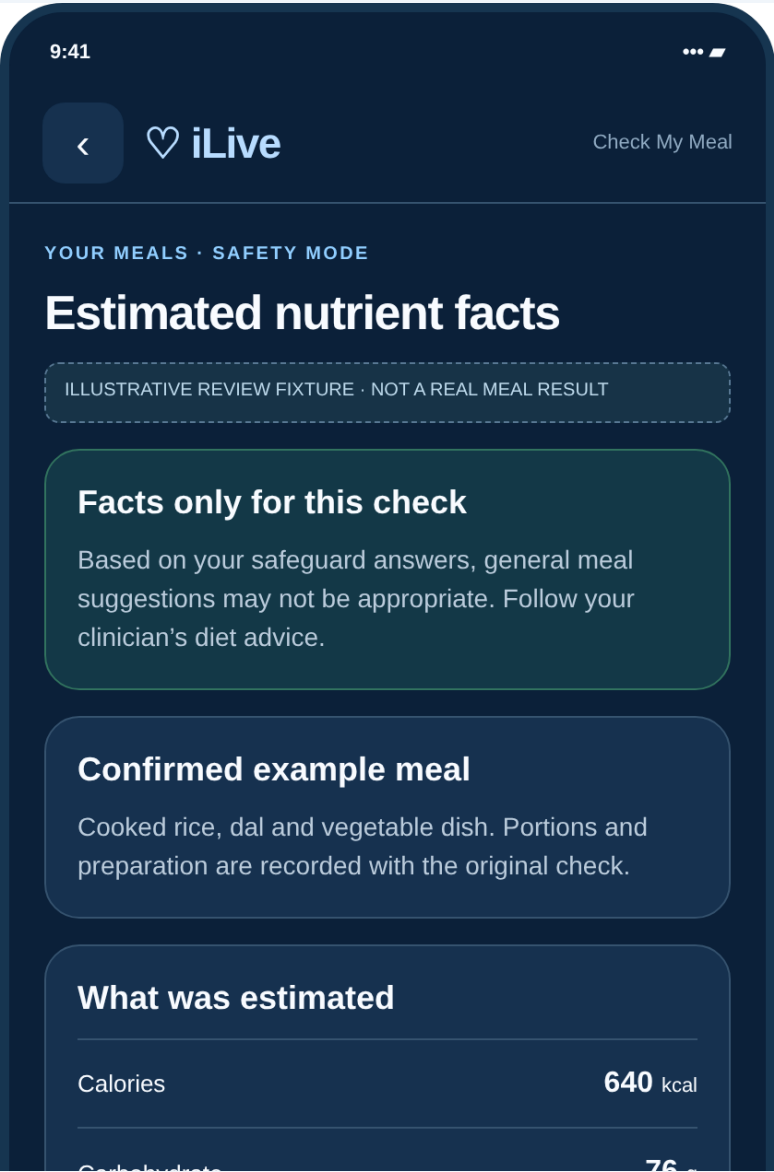

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Nutrient facts only

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Same result template, safety variant. No targets, traffic lights, suitability judgement, suggestions or glucose-impact category.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

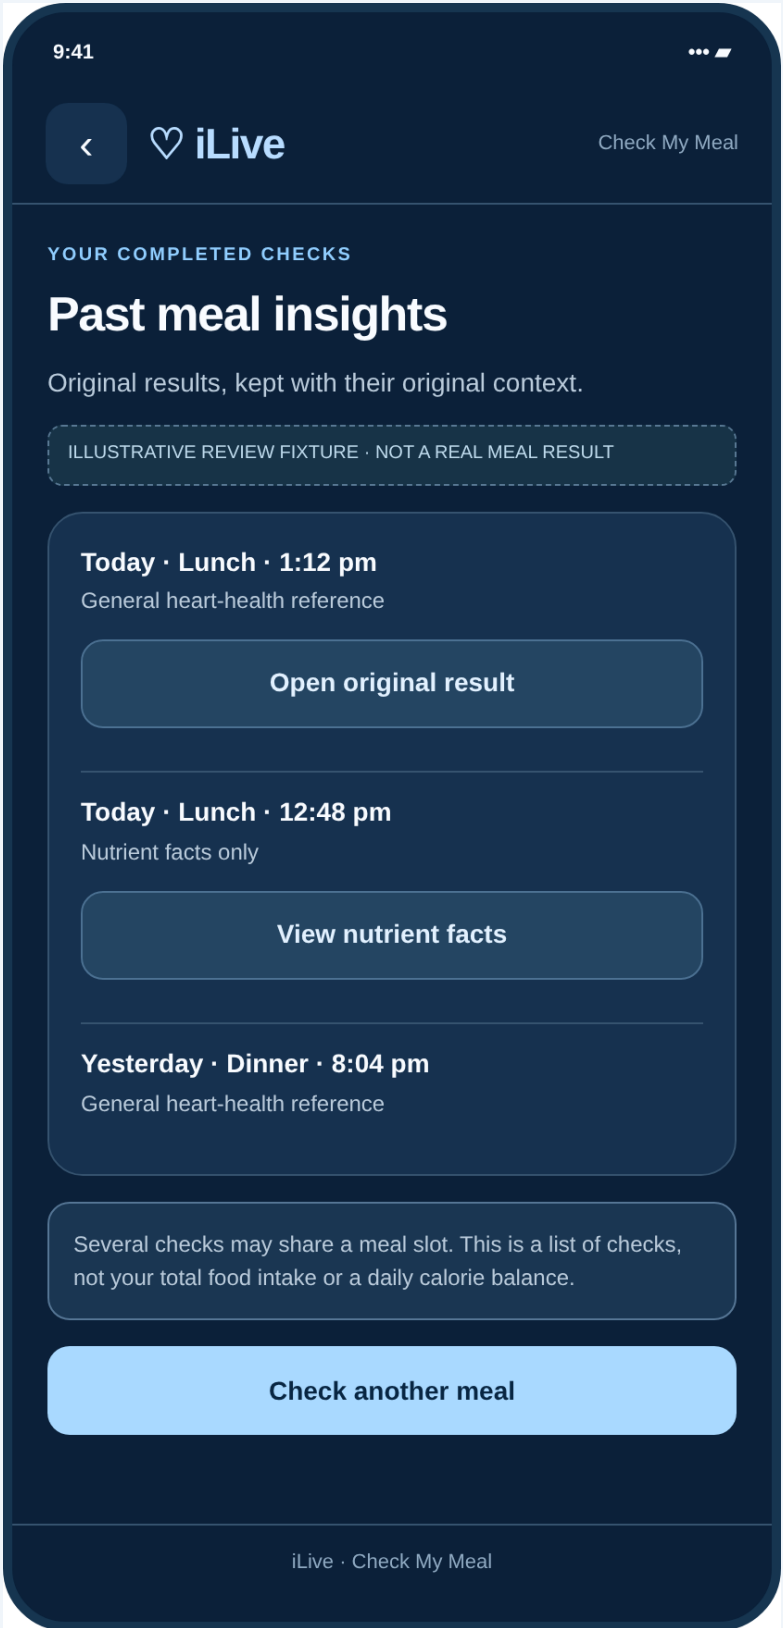

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Meal history

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

Only completed checks. Multiple entries in one meal slot are allowed; these are not proof of consumption or a daily intake total.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

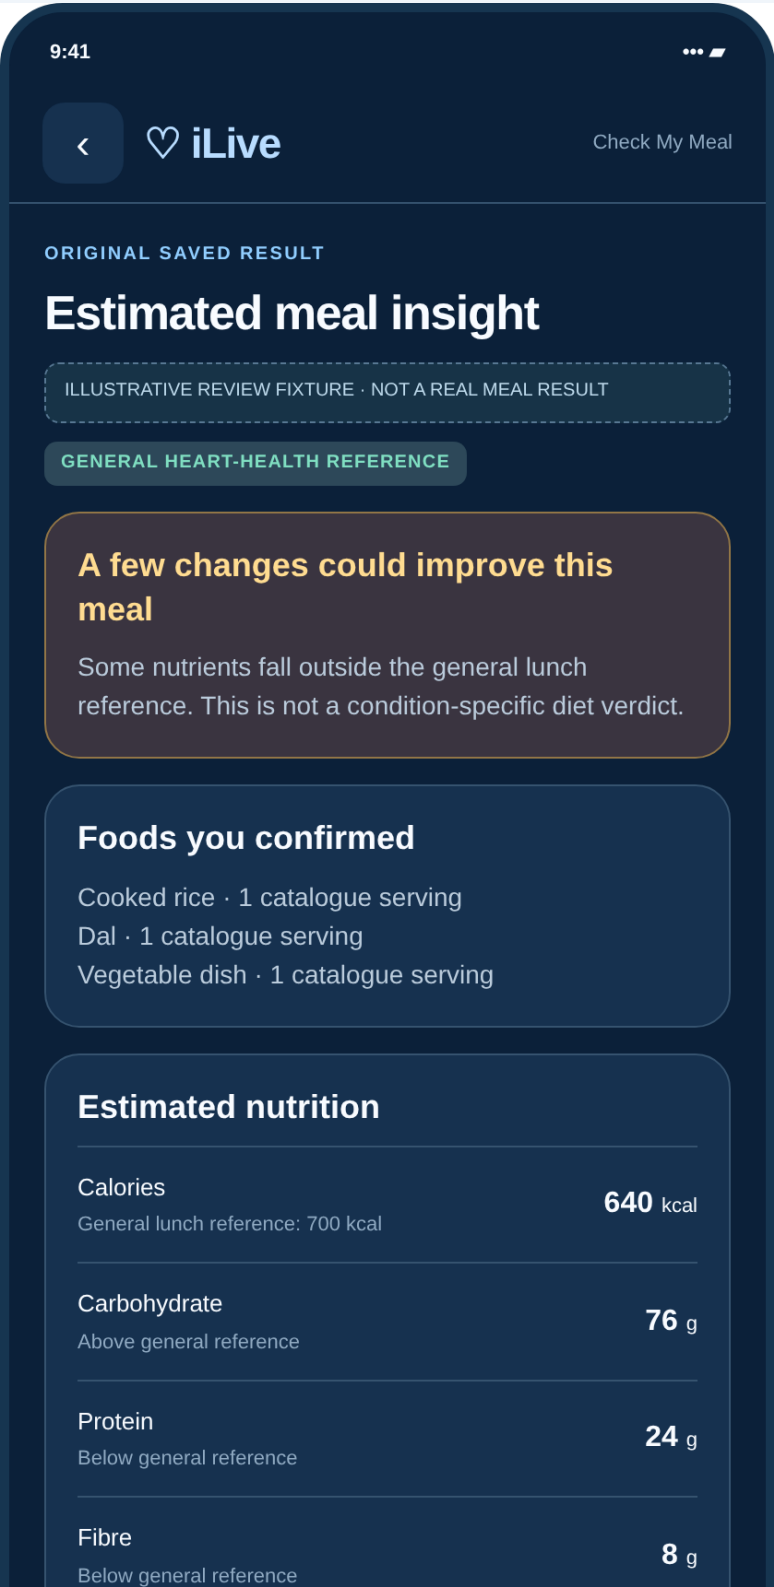

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

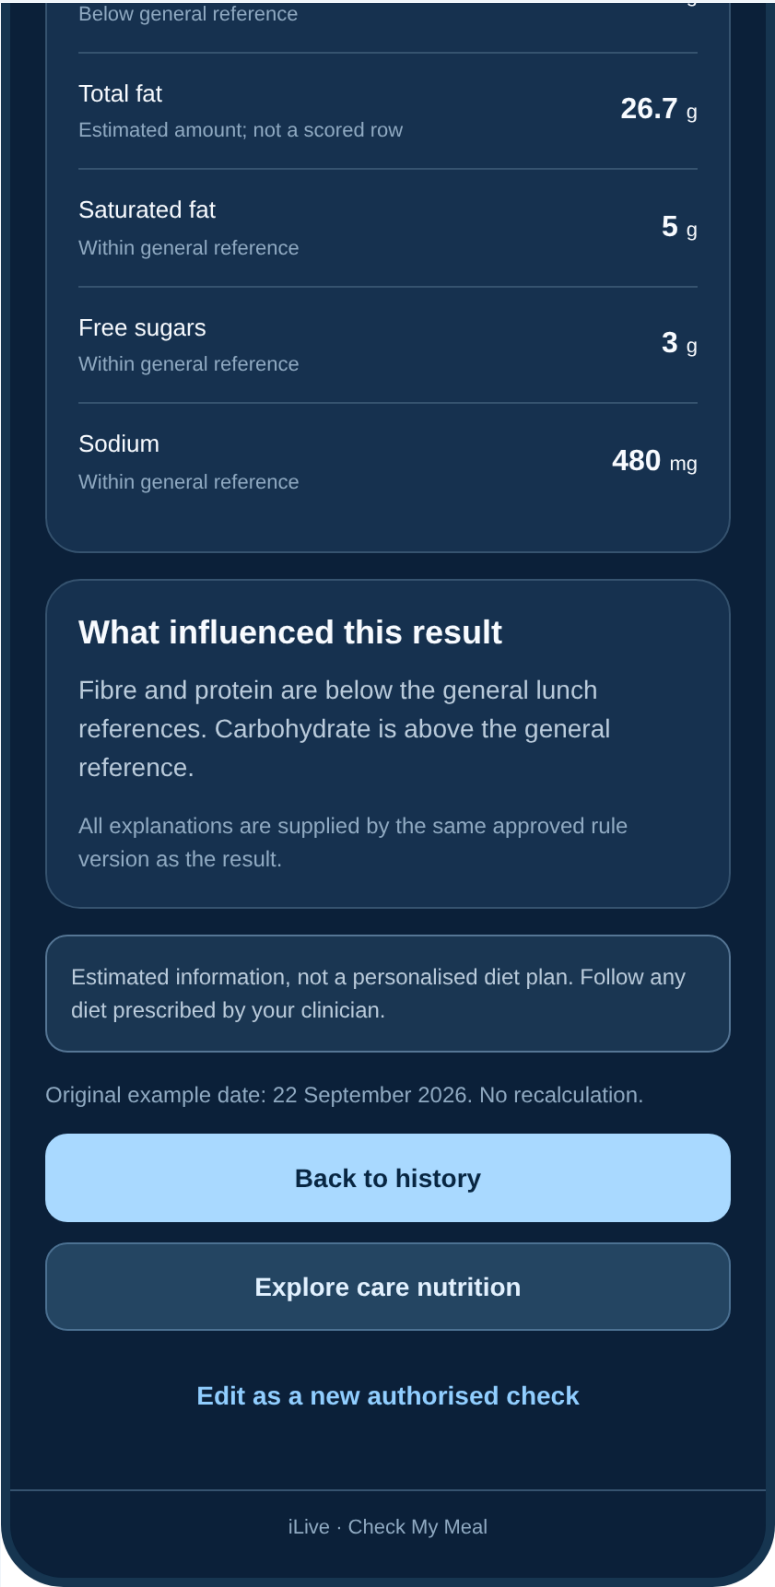

Historical result detail

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Original result and original context. Changing browsing category or current rules never rewrites history. Edit creates a new authorised draft.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

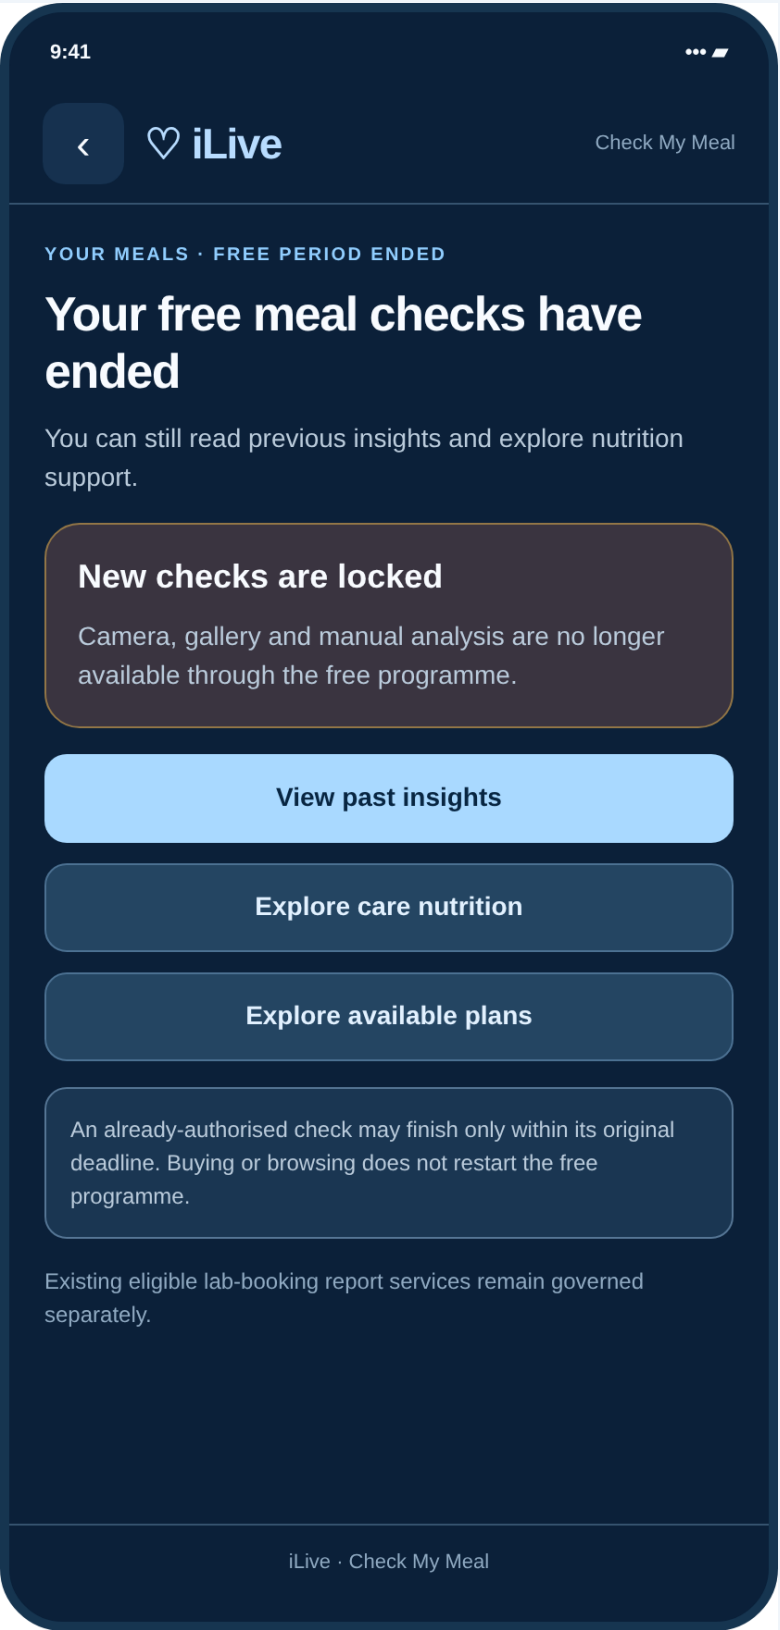

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Free analysis ended

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

New camera/gallery/manual analysis is locked. History and approved care previews remain readable. No timer restart from browsing/purchase.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

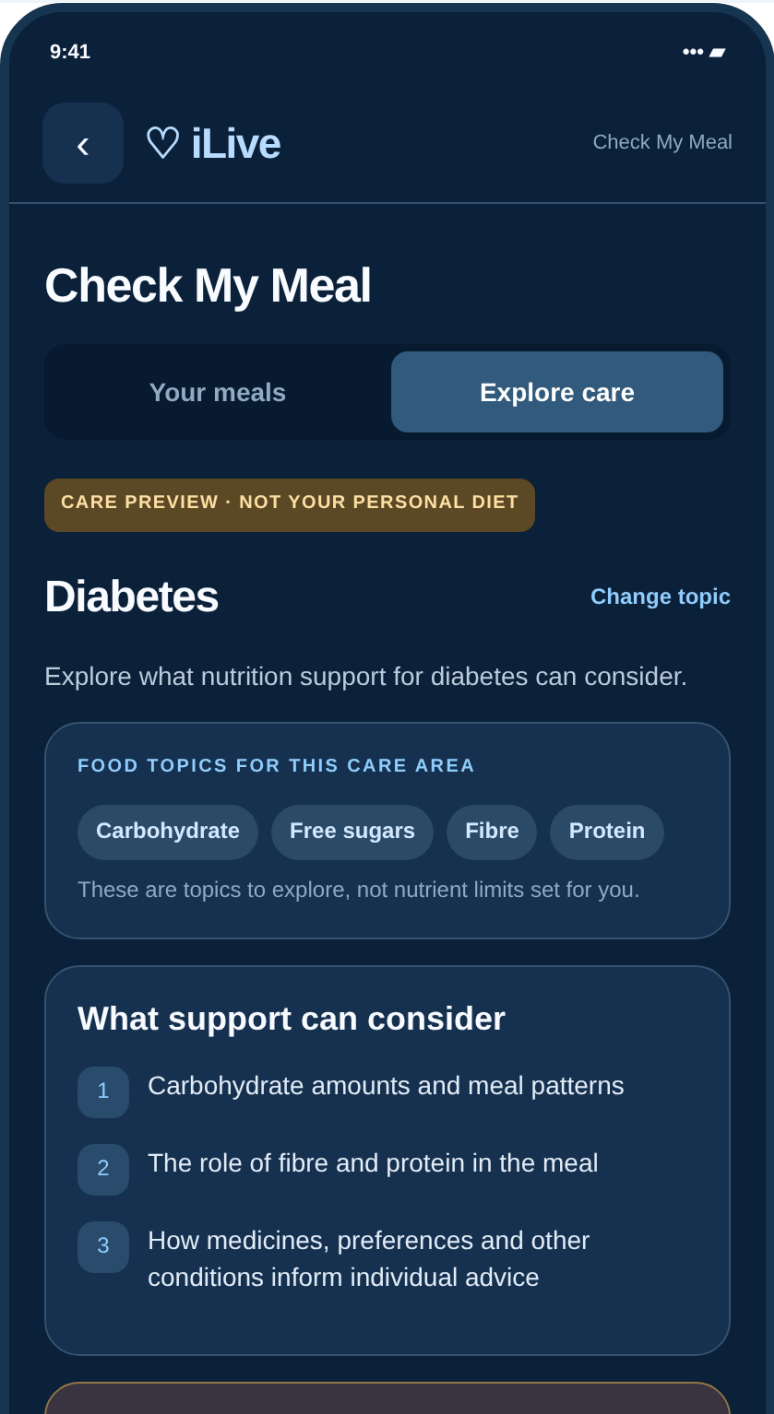

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

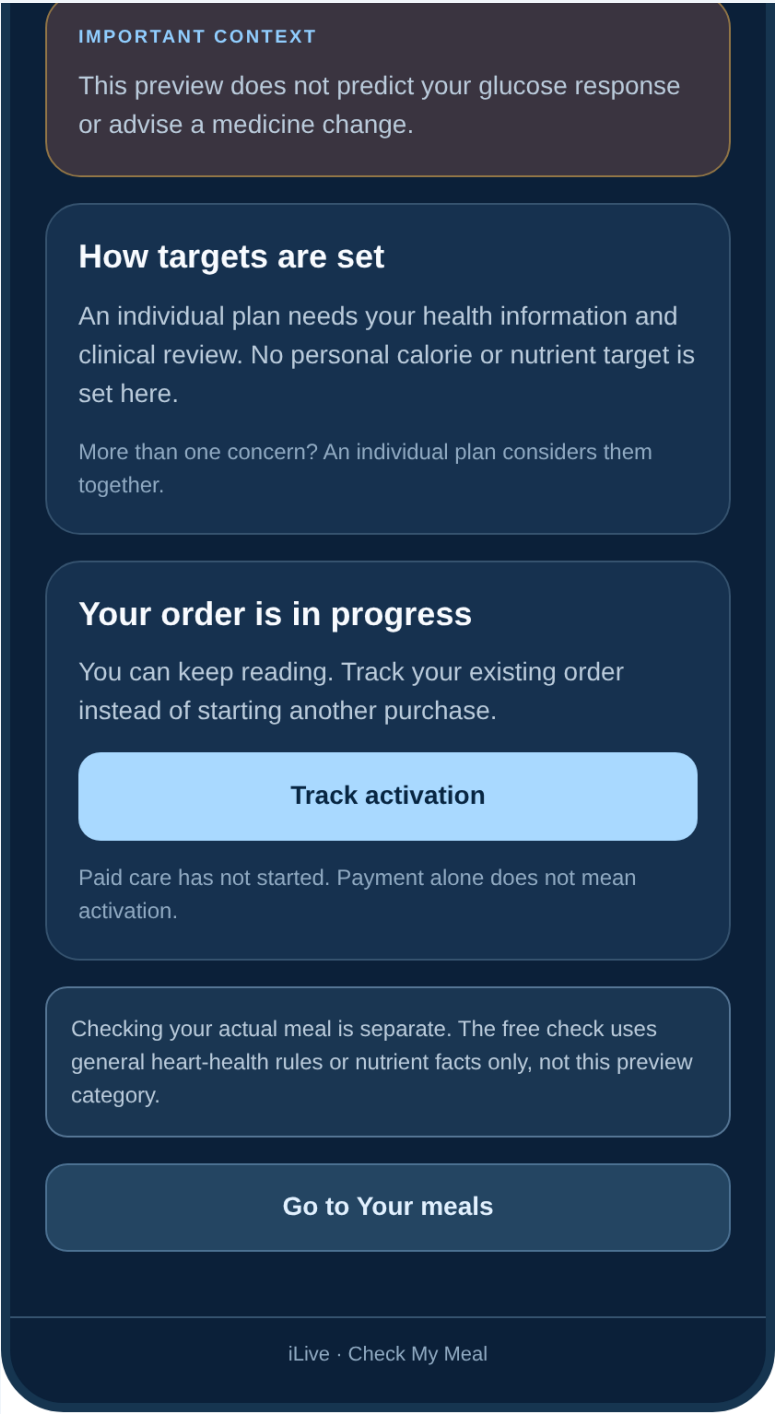

Preview - paid order pending

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

TOP OF SCROLL

CONTINUED BELOW

What the team must implement

Commercial state variant. Replace Explore plans with Track activation; preview selection cannot create a second primary order.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

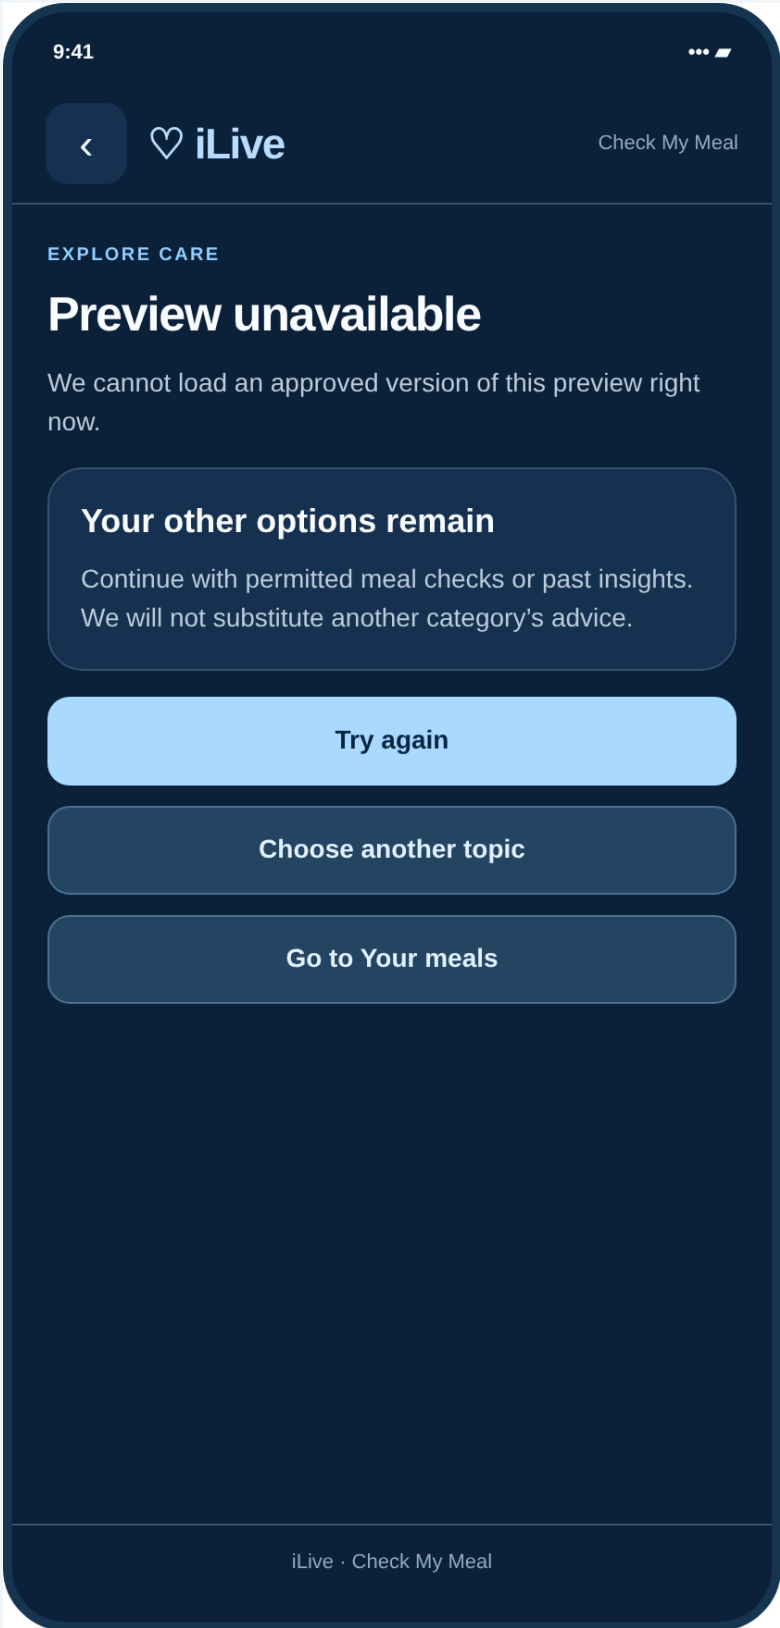

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Preview content unavailable

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

No stale revoked, partial or unrelated-category content. Other permitted activities remain available. Unknown required blocks fail safely.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

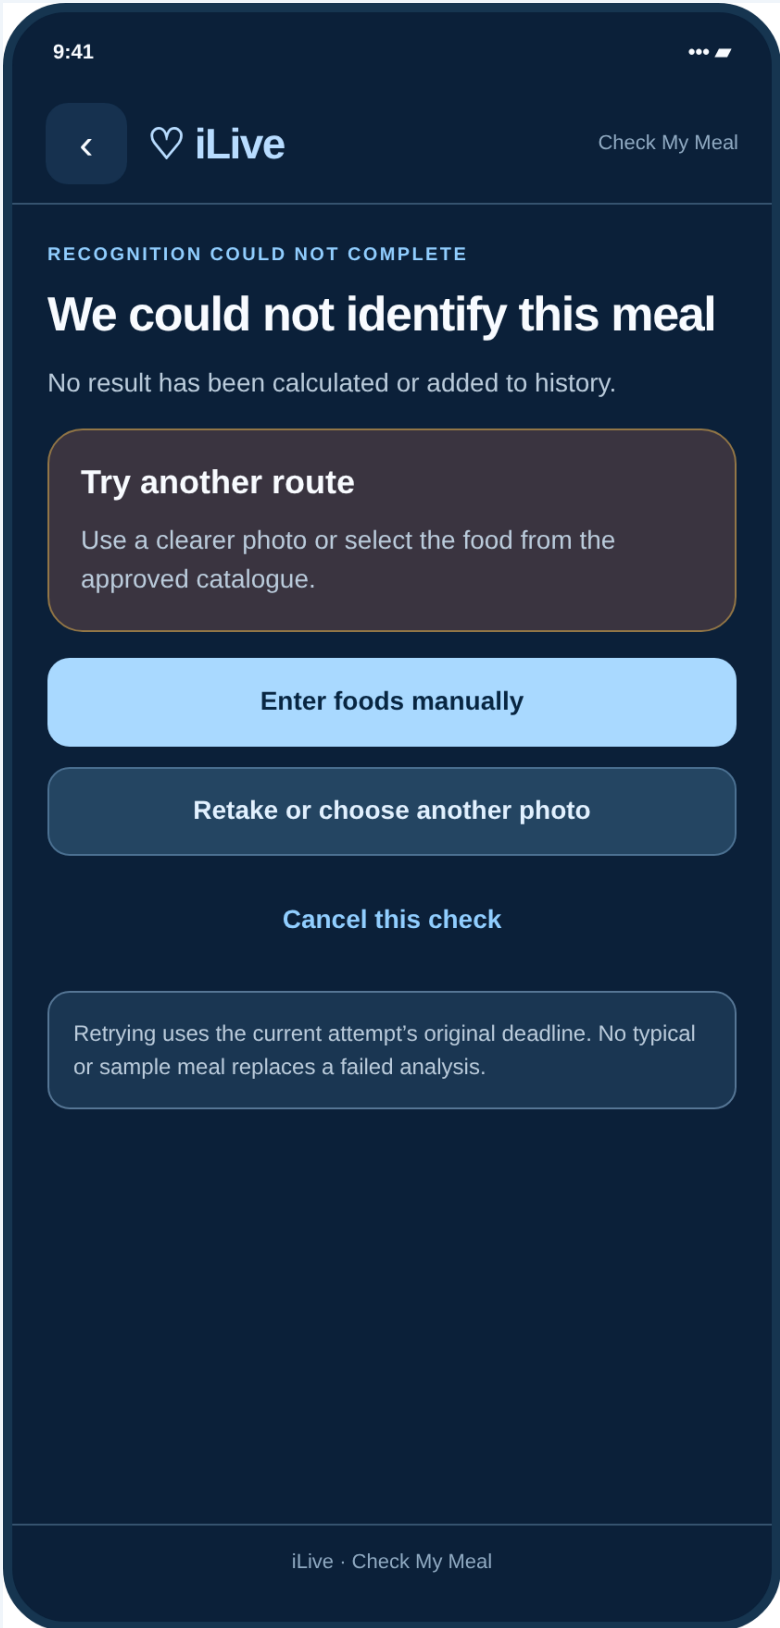

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Meal recognition failure

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

No sample-meal substitution. Retry/manual recovery uses the original attempt deadline. A new draft requires new authorisation.

Shared constraints

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

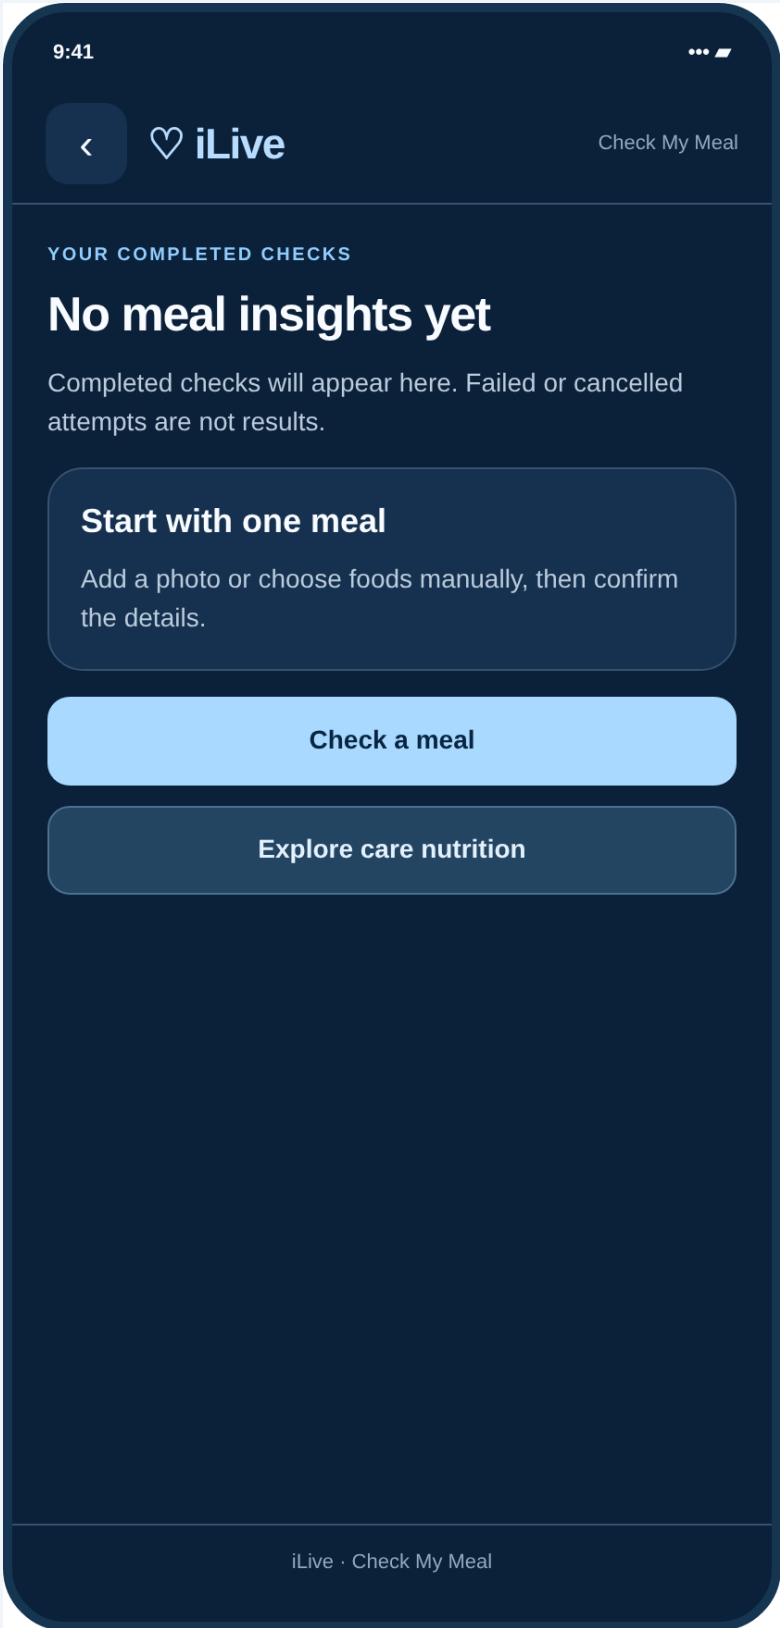

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

Empty meal history

Proposed copy and illustrative fixtures. Shared navy visual system; not production clinical output.

MOBILE VIEW

What the team must implement

History empty state; no fabricated examples in personal records. Illustrative review fixtures are not production records.

Shared constraints

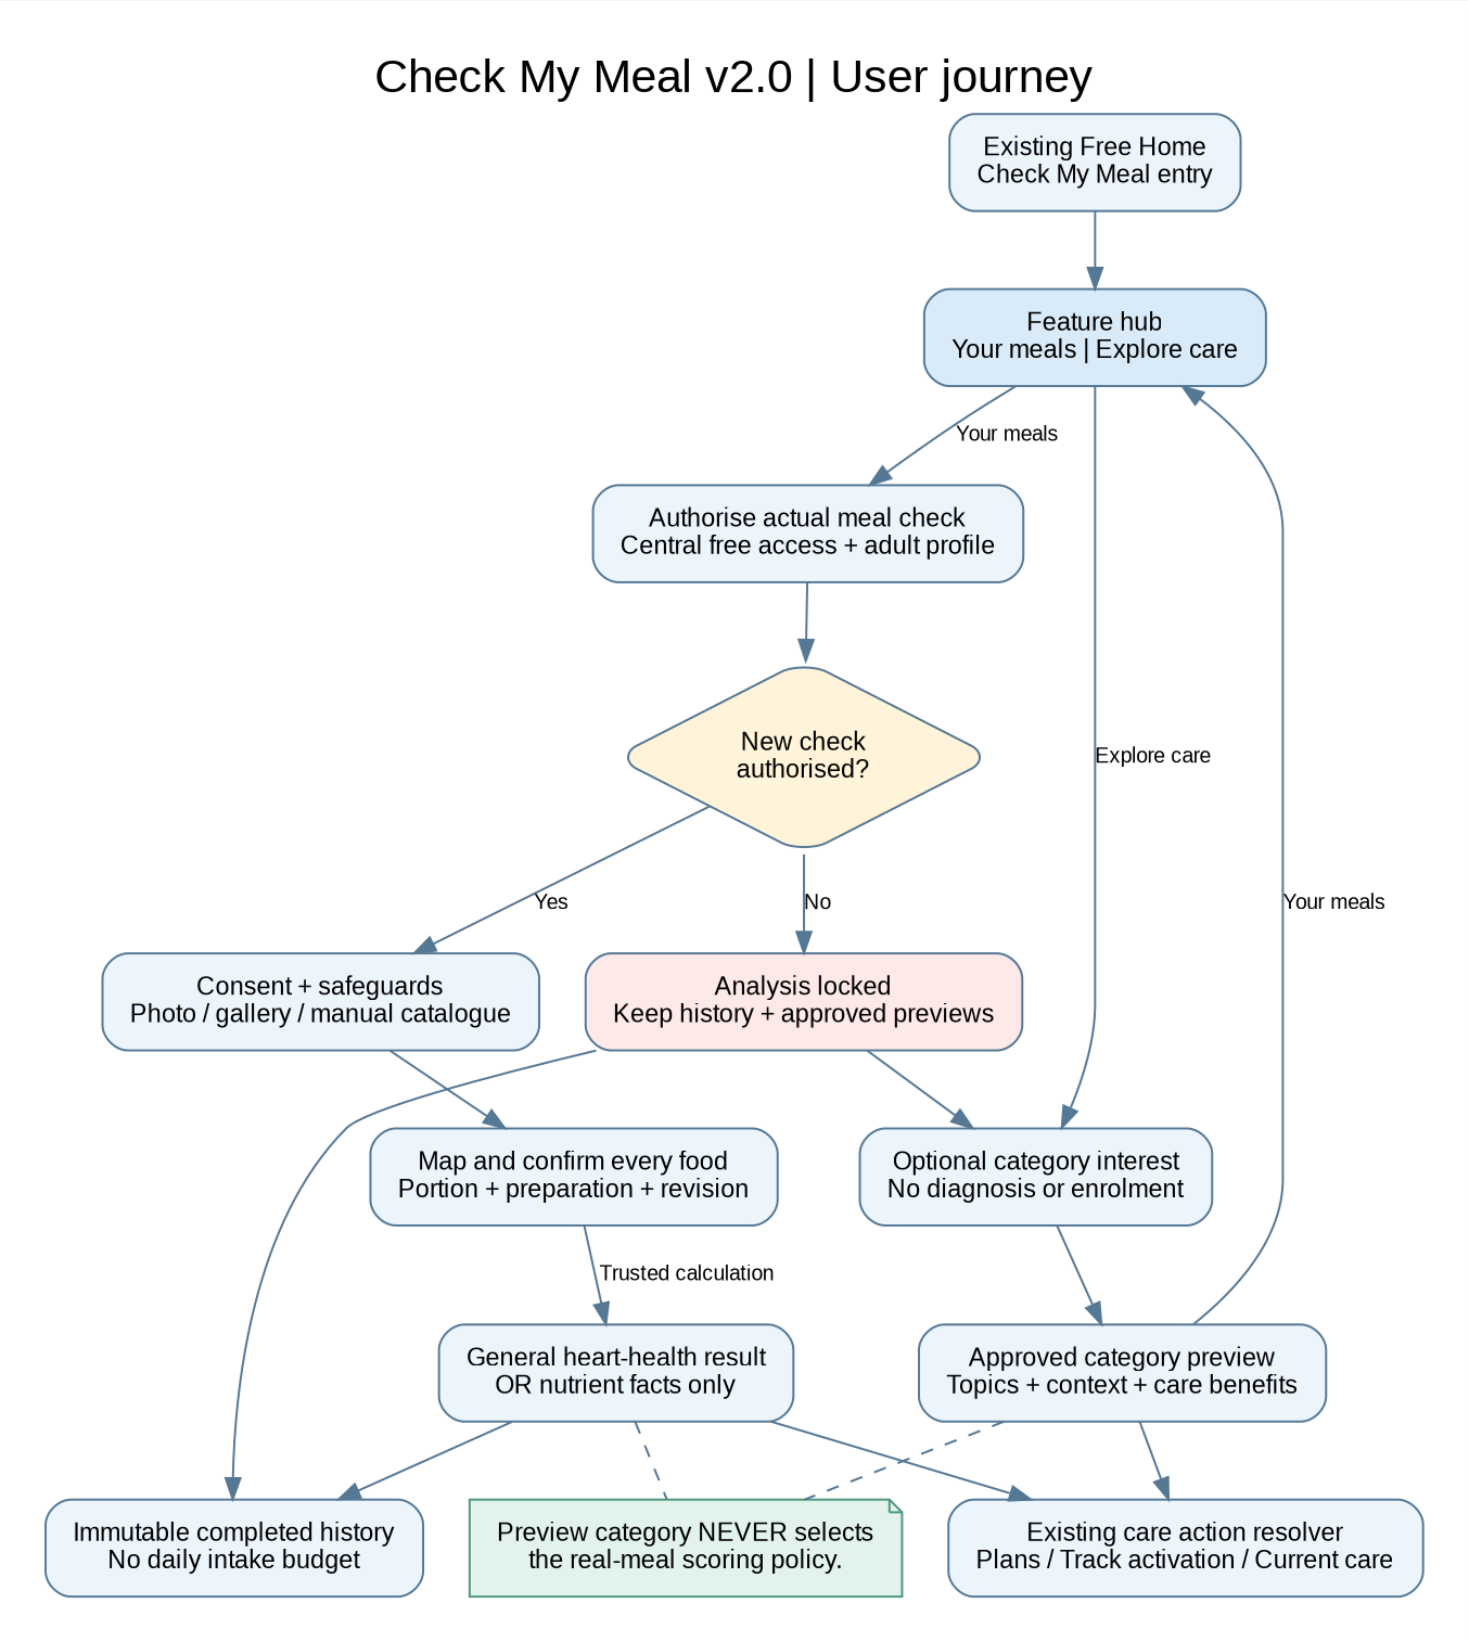

Preview interest is not a diagnosis. Actual analysis uses the server-selected general policy or facts-only mode. No new personal target or paid entitlement is created.

Source of truth

Use the paired v2.0 issue and backend contract. Snapshot fields are examples; no nutrient value is derived from these images.

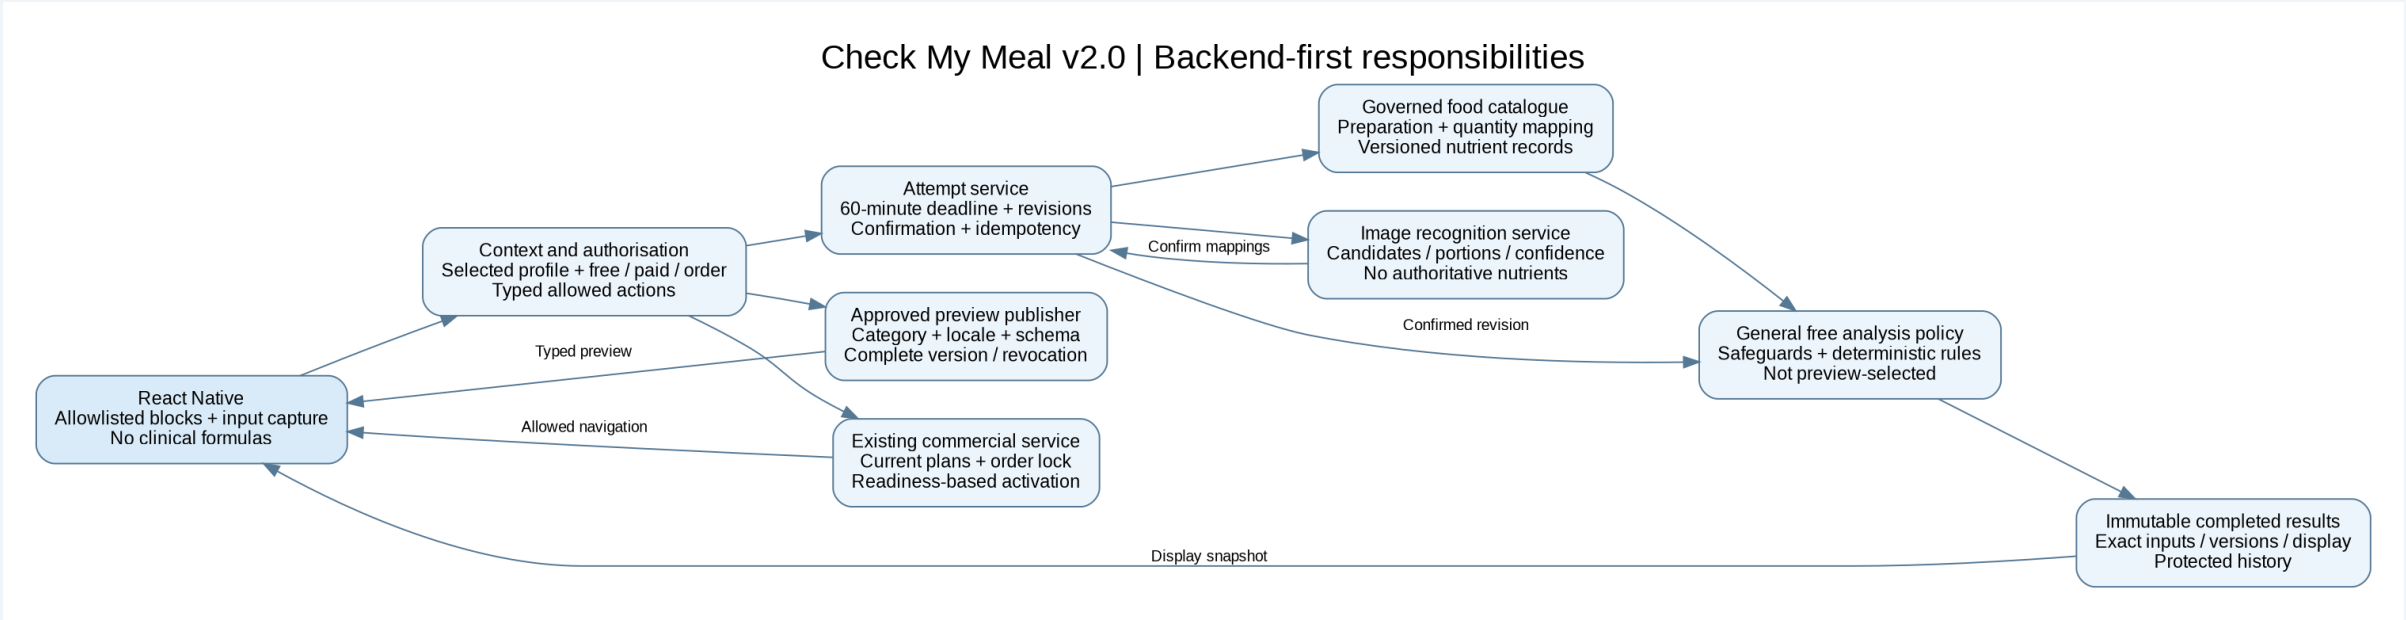

Two activities, one clear boundary

Editable Mermaid and Graphviz sources are supplied. These are proposed integration behaviours, not confirmed existing services.

Backend-first responsibilities
